Modules

Structure

Semantic Links

Description

Boxes for content, typically on the left or right of a portal-style site but can be placed anywhere, even in page content, with or without a visual frame. Very useful for navigation and content re-use. **Over 100 built-in modules** are available, and site admins can create their own.

In Tiki terminology, a structure is a hierarchy for wiki pages. Structures have navigational features such as breadcrumb links and menus; also enabled is printing all pages in the structure and in order.

Going beyond **Backlinks**, allows to define some semantic relationships between wiki pages

Score

Accessibility

Description

If appropriate for the site, this feature implements a game approach to motivate people to participate in the online community. Users are given points for things they do in the site, like writing or reading an article, starting a new topic in a forum, voting in a poll, etc. They also earn points by having his/her blogs and articles read and commented on. Then the users will be able to see their position in a ranking.

Not so much a feature as a value, [web accessibility](#) is prioritized in Tiki.

We eat our own [DogFood](#)

Description

Tiki is a community. Tiki is a software. The Tiki community is recursively using and improving the Tiki software, which is used to support the community as well as to make available to the general public.

Dev (Bug reports & Feature requests)

Feature name and link

Open Development

Open standards and protocols

Description

Written and maintained by an active and international community of volunteer contributors. While many developers offer consulting services, no company controls the development.

Think of Tiki as applying the wiki way not just to content but also to software development. YOU are invited to participate!"

Please read more about the [Tiki Model](#)

Tiki developers are Tiki users too and prefer open protocols and standards -

<http://tiki.org/TikiStandards>.

Dev (Bug reports & Feature requests)

Feature name and link

Platform independence

Browser Compatibility

Documentation

Description

Tiki runs wherever PHP runs, on Linux, Mac, Windows and many more other operating systems.

On the client side, all you need is a Web browser running on a desktop computer, laptop, tablet, or smartphone.

Tiki's documentation is a wiki (of course!). So you can participate! There are links from your installed Tiki application directly to the corresponding documentation wiki page. As the documentation is constantly being updated and organized, broken links may sometimes occur. Please bear with us and feel free to participate!

Dev (Bug reports & Feature requests)

Feature name and link

External Libraries

Description

Tiki makes good use of existing and active open source projects such as Zend Framework, Smarty, MySQL, PHP, jQuery, Bootstrap, CKeditor, etc.
