10. Grouping Wiki Pages into a Navigable Structure

Grouping wiki pages into a navigable structure is a key feature of Tiki. It allows administrators to organize a collection of wiki pages into a hierarchical tree or book. This structure can be easily navigated by users, with blank pages created where they do not already exist. Creating a structure is the fastest method for creating multiple pages at once. Navigation aids are automatically created to help users move through the structure. It's a great way to make a book.

Grouping Wiki Pages into a Navigable Structure

Grouping wiki pages into a navigable structure is a key feature of Tiki.

Structures

Structures organize a group of wiki pages into a tree or book that can be easily navigated by users. The pages are placed in a hierarchy that you specify, with blank pages created where they do not already exist. Creating a structure is the fastest method for creating multiple pages at once. Navigation aids are automatically created to help users move through the structure. It's a great way to make a book.
