

# Apply Profiles tab

## Overview

Use this tab to select and apply a profile from a repository to your Tiki

## To Access

From the Profiles Admin page, click the **Apply Profiles** tab.

## Note

Starting in Tiki3 the profile system is a powerful and versatile system that can be managed by the Tiki community. See <http://profiles.tiki.org>. Profiles give the installer a choice of partially configured sites to install. They give a head start on the configuration process by picking a type of site that is similar in purpose.

**Profiles** Apply Profiles Advanced

Configure Tiki in 3 easy steps using Profiles

Profiles

Step 1: Use the **Quick** or **Manual Filter** option to see a list of Profiles you can apply

Option 2: Manual Filter

Filter the list of profiles:

Profile:

Categories:

Repository:

Step 2: Click on a Profile to review and see description

Profile	Repository	Categories
Collaborative_Community_6.x	profiles.tiki.org	beta, Featured profiles, 6.x
stetitle	Our community	
stetitle	Log on, Learn, Share	
browsertitle	Community/Wiki	

Step 3: Click on **Apply Now** to apply Profile

**Table of contents**

Field name	Description	Value

Starting in version 2.x (as a hidden feature) and specially after 3.x, you can point your browser to **tiki-admin.php?page=profiles** ("Admin home > Profiles"), allowing to set up at any time bunches of features in a certain way to produce specific use case of interest.

New Tiki 2.x and 3.x profile system

Old profile system (< Tiki 2.x)

In Tiki 1.9, profiles were only active during the installation process. You could not go back and pick a different profile unless you re-installed the database, losing all your changes.

Selection of profile at <http://yourdomain/tiki-install.php?lang=XX>

# Requirements

Your php must have the option `allow_url_fopen` On or must have the library curl installed.  
Javascript must also be enabled on your browser

# Details of Supported Profiles

# Tiki 3.x

See <http://profiles.tiki.org>

"Profiles" up to Tiki 1.9.x was a feature used only when you install Tikiwiki. It set up the Tikiwiki according to an existing configuration that was "saved" from another site.

Until version 2.x, this feature is only active during the installation process. You could not go back and pick a different profile unless you re-installed the database, losing all your changes.
