Groups

In Tiki, **Groups** are the primary means to control [permissions settings](#) and access to [categories of objects](#) in your web site. It is one of the features that makes Tiki stand out from the other wiki/cms software out there.

Using groups and categories, you can create your own "wiki hotel" where any number of groups can have private "rooms" (sets of pages) that only they (and the site administrators of course) can access.

To configure groups goto <http://yoursite/tiki-admingroups.php>

GROUP HOME PAGE

Each group can have a group home page that they are automatically taken to when they log into the site. If they are a member of several groups, the default group is chosen.

This is only available once it is enabled, via
Admin->General->Navigation Tick box: Use group homepage.

STEPS TO CREATE A PRIVATE ROOM:

1. Create a group and a category with the same name e.g: steering (a committee)

2. Have a list of users, you can upload a .csv if you like, either way assign all your users to this group.
3. Assign pages to the category you created.
4. Assign permissions to the category such that the permissions ***view_categories*** and ***admin_categories*** are awarded to the appropriate group.
5. Ensure that any new pages created are included in the category as well, otherwise they will not be protected.

Tiki, moreover, has another way to manage groups, categories and permissions in a more flexible and advanced way, but if you are new to Tiki, you will be fine adding groups, categories and permissions step by step.

When you are an advanced user / admin, and you need to manage large sets of groups with some frequency (like educational scenarios), you can take advantage of the "[Workspaces](#)" feature.

Creating Groups

To create a group:

- Expand the Admin drop down:
- Click on Groups, you'll see the page below

List of existing groups

Find Number of displayed rows

name	desc	Includes	Permissions
Anonymous	Public users not logged	2	
Coaches	Youth Team Coaches and Assistants	9	
Referees	Referees and Assistants	16	
Registered	Users logged into the system	3	
Volunteers	Concession Stands, Field Maintenance, Fund Raising	14	

Add new group

Group:

Description:

Include:

Group Homepage:
(Use wiki page name or full URL)
To use a relative link, use ex.: <http://tiki-forums.php>

- Fill in the form with the **group** name and description
- If the **group** you are creating should be included as a sub-group of another **group**, use the include box to choose the **group** or **group** that the new **group** should be a part of.
Note: By default, all groups will include the **Registered** group.
- If the **group** should have it's own homepage, put the wiki page name or full URL in the Home Page Box (Do not forget to have checked 'Use group homepages' in admin->general) . Special value: the user homepage prefix (ex: UserPage) can be use to redirect a user to his homepage

at login.

- When all fields have been filled in click the Add button. The form will refresh and you **group** will appear in the new list (see below)
- Group Default Category(Default category assigned to objects edited by a group user):
(**tw**>=1.10)If a user with a default group (do not forget to set the default group for each user) edits (create or modify) an object and save the object without putting a category, the specified category is automatically assign to the object.

Assigning users to groups.

From the user administration screen click on the gold key to the right of the user line.

	Name	Email	Last login	Valid	Groups
<input type="checkbox"/>	admin		Friday 25 of May, 2007 03:28:51 UTC	yes	
<input type="checkbox"/>	aferguson	fergie@example.com	Never ()	yes	coaches(x) Registered(x)

Click on the key to assign this user to a group

The assign user form will be opened (see below)

This form shows the user information, the **group** that the user already belongs to, and a list of **group** that the user can join. There are also shortcuts to **group** permissions, **group** admin, and user admin from this page.

Assigning permissions to groups.

From the [group](#) administration screen click on the gold key icon for a particular [group](#) and you will see a screen divided in two parts. The first part (see below) shows the permissions that are currently set for the group.

The lower part of the screen shows all the permissions available to the [group](#), as well as details about the currently assigned permissions.

The entry below shows that the permission has been inherited from the permissions given to registered users.

<input checked="" type="checkbox"/>	tiki_p_view_calendar	calendar	Can browse the calendar	inherited from Registered
-------------------------------------	----------------------	----------	-------------------------	---

An entry like the one below shows that the [group](#) has permission to administer the feature, in this case, calendars.

<input checked="" type="checkbox"/>	tiki_p_view_calendar	calendar	Can browse the calendar	inherited from Registered	admin
-------------------------------------	----------------------	----------	-------------------------	---	-----------------------

Additional permissions are assigned by clicking the checkboxes next to the permission, and then clicking the update button at the top or bottom of the page when finished.

- To change [group](#) Name, Description, Subgroups Included, or Homepage, edit the form and click the save button.
- To remove a [group](#) member, click on the red X next to the members name. __Note!: This does not remove the user, it just takes them out of the group.

Assigning a tracker to a **group**

see: [Group Tracker](#)

Group Permissions

In this section you can see information for the **group** that you selected as name, description and permissions assigned.

Then you can create a new permission level and you can if you want assign all the permissions in some level to the group. Or remove all the permissions in some level from this group. As you can see permissions are organized in levels. By default Tiki comes with four prearranged levels that you can modify as you want:

- Basic: permissions for anonymous users, basic site usage
- Registered: permissions for logged users
- Editor: Permissions to site editors can manipulate content.
- Admin: Permissions for admins only. Can be dangerous if misused

In the second part of the screen you can assign permissions and change levels.

name	level	type	desc
<input type="checkbox"/> tiki_p_admin	admin	tiki	Administrator, can manage users groups and permissions and all the weblog features
<input type="checkbox"/> tiki_p_use_HTML	editors	tiki	Can use HTML in pages
<input type="checkbox"/> tiki_p_edit_templates	admin	tiki	Can edit site templates
<input type="checkbox"/> tiki_p_admin_dynamic	editors	tiki	Can admin the dynamic content system
<input type="checkbox"/> tiki_p_admin_banners	admin	tiki	Administrator, can admin banners
<input type="checkbox"/> tiki_p_admin_categories	editors	tiki	Can admin categories
<input type="checkbox"/> tiki_p_vote_poll	basic	tiki	Can vote polls
<input type="checkbox"/> tiki_p_edit_cookies	editors	tiki	Can admin cookies
<input type="checkbox"/> tiki_p_view_stats	basic	tiki	Can view site stats
<input type="checkbox"/> tiki_p_view_referer_stats	editors	tiki	Can view referer stats
<input type="checkbox"/> tiki_p_eph_admin	editors	tiki	Can admin ephemerides
<input type="checkbox"/> tiki_p_admin_mailin	admin	tiki	Can admin mail-in accounts
<input type="checkbox"/> tiki_p_edit_languages	editors	tiki	Can edit translations and create new languages
<input type="checkbox"/> tiki_p_admin_banning	admin	tiki	Can ban users or ips
<input type="checkbox"/> tiki_p_create_css	registered	tiki	Can create new css suffixed with - user

The top section is used to select a permission category, for example games, forums, FAQs, etc. All can be used to see all the permissions at once (the screen will be VERY long). For each category for which permissions will be displayed the checkboxes indicate if the permission is assigned to the **group** or not. You can assign/remove permissions using the checkboxes; you can also change the level of any permission using the dropdown. In this way you can re-classify the permissions as you need and then easily assign all level-x permissions to a **group** whenever you want.

When a user belongs to more than one **group** the permissions are accumulated.

Permissions

Permissions are what **group** CAN do. Note that permissions always ALLOW **group** to do things; there are no restrictive permissions in Tiki because they can conflict if the user belongs to more than one group. The list of permissions that you can assign to **group** are:

PERMISSIONS FOR INDIVIDUAL USERS

What if you want to give a specific user some permissions? Just create an artificial [group](#), assign the user to that [group](#) and give the [group](#) the permissions that you need.

INDIVIDUAL PERMISSIONS

As we explained you can set up individual permissions for some Tiki objects. When assigning individual permissions the permissions you can assign are the same as you have in the global permissions screen. Once an object has individual permissions only the individual permissions apply to the object, and not the global permissions.

The following objects accept individual permissions:

- Wiki pages
- Image galleries
- File galleries
- Forums
- Weblogs
- Newsletters
- Surveys
- Quizzes
- Trackers

- [Permissions](#)
- [Users](#)
- [Group Transitions](#)
- [Group emulation](#)
