

# Geographic feature Tracker Field

This field stores a geographic features on the map, allowing paths (linestring) and boundaries (polygon) to be drawn on the map and to be saved.

To make this possible, you must export the profile **Cartograf**.

In one of the Trackers of the profile **Cartograf** in this case the Tracker **Zones** connected to the Tracker **Map** through the field **Map** of the Item Link type, you can see the field **Zone** of the Geographic Feature type. It is through this field that you can, once the profile has been exported, draw the paths and boundaries on a map that you would have created.

As you can see from the capture below, the Tracker **Zones** has a field of type **Geographic Feature** called **Zone**.

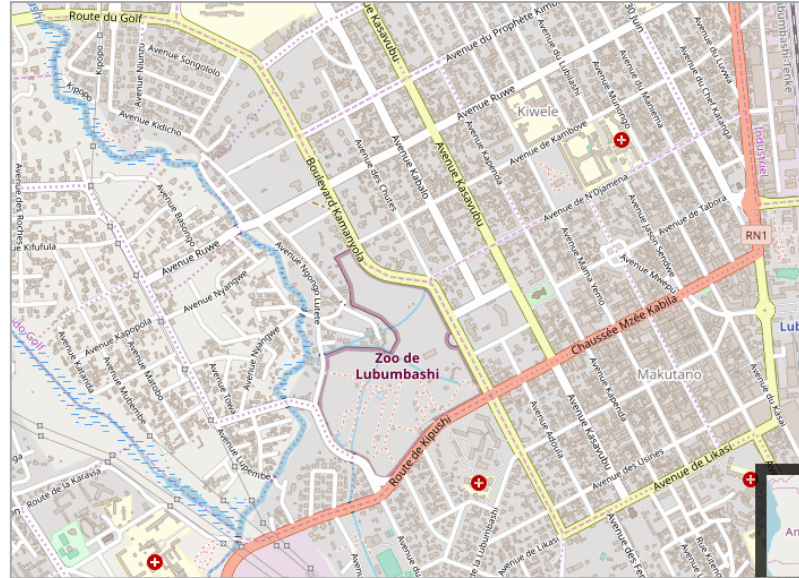

<input type="checkbox"/>	ID	Name	Type
<input type="checkbox"/>	95	Name zoneName	Text Field
<input type="checkbox"/>	96	Description zoneDescription	Text Area
<input type="checkbox"/>	97	Attachments zoneAttachments	Header
<input type="checkbox"/>	112	Image zoneImage	Files
<input type="checkbox"/>	98	Details zoneDetails	Header
<input type="checkbox"/>	113	Map map	Item Link
<input type="checkbox"/>	99	Finder finder	User Selector
<input type="checkbox"/>	115	Zone zoneFeature	Geographic Feature
