

In Tiki 7 we started to move from GoogleMaps (GMap) to OpenStreetMaps, respectively OpenLayers, which offers a GoogleMap layer. Latest since Tiki 13 we are using only OpenLayer (OpenStreetMap) and step b step remove(d) ll code from old MaServer and GMap.

Please visit the following pages, if you want to use Maps in Tiki:

[OpenLayers](#), [Maps](#), [PluginMaps](#)

Please mind: This page stays here only for historic reasons and to guide to [Tiki's OpenLayers page](#)

Update: Since Tiki 7. this field has become the [Location Tracker Field](#). For more info, read below.

Google Maps Trackers Field

This field allows you to add a google map in your [tracker](#). In Tiki7, this has become [Location Tracker Field](#) so as to also support [OpenStreetMap](#).

Parameters

None

Input field

The screenshot shows a web form titled "Edit Item". At the top, there are two buttons: "View" and "Edit/Delete". Below the title, a note states "Fields marked with a * are mandatory." The form contains three input fields: "Status" with a dropdown menu showing "open", "name" with a text box containing "fenway", and "map" with a text box containing "-71.098326,42.345573,11" and a link labeled "Google Map Locator". At the bottom, there are two buttons: "Save" and "Save & Back Items list" with a red "X" icon to its right.

The coordinates must be entered as x,y,zoom

where x is the x coordinates or the latitude and y is the Y coordinate or the longitude and zoom is the zomm level (0 for all the earth, 13 can be a town level)

Output field
