

# Hybridauth social login

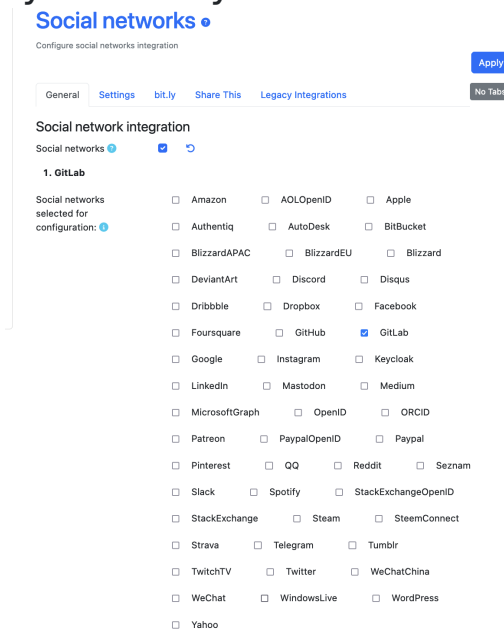

The connection to the website through social networks uses the Hybridauth library it allows the visitor, to quickly register on a site by letting their network provide information about themselves. The principle of operation is simple. When a user chooses a social network, he is sent to the server of the latter. There he is invited to enter his details. When they are validated, he is returned to the Tiki site on which he wanted to connect.

## Configuration steps

To achieve this some data must be provided:

*Note: In this document YourSocialNetwork represents the name of the social network of your choice.*

First, you need to enable the Social Network feature in Tiki. To do this you need to login as admin, go to the Admin dashboard in the menu **Settings** -> **Contol Panels**. Check your admin filter preferences is set to advanced and in the Panel Feature, Mail and Sharing enable **Social Network**. (tiki-admin.php?page=features#Mail\_and\_Sharing)  
Then, go to the **Social networks** panel -> **General** tab (tiki-admin.php?page=socialnetworks#content-admin1-1) select one or several site you want your users to be allowed to sign in and apply.

Secondly, go now to the tab **Settings**, your site choices will be visible in different section. In each section the

Your Social Network login allowed checkbox should be checked so you can enable/disable a single access. Under it you will find a button **More/Less** that toggle specific information you need to provide to allow your users to login using this method.

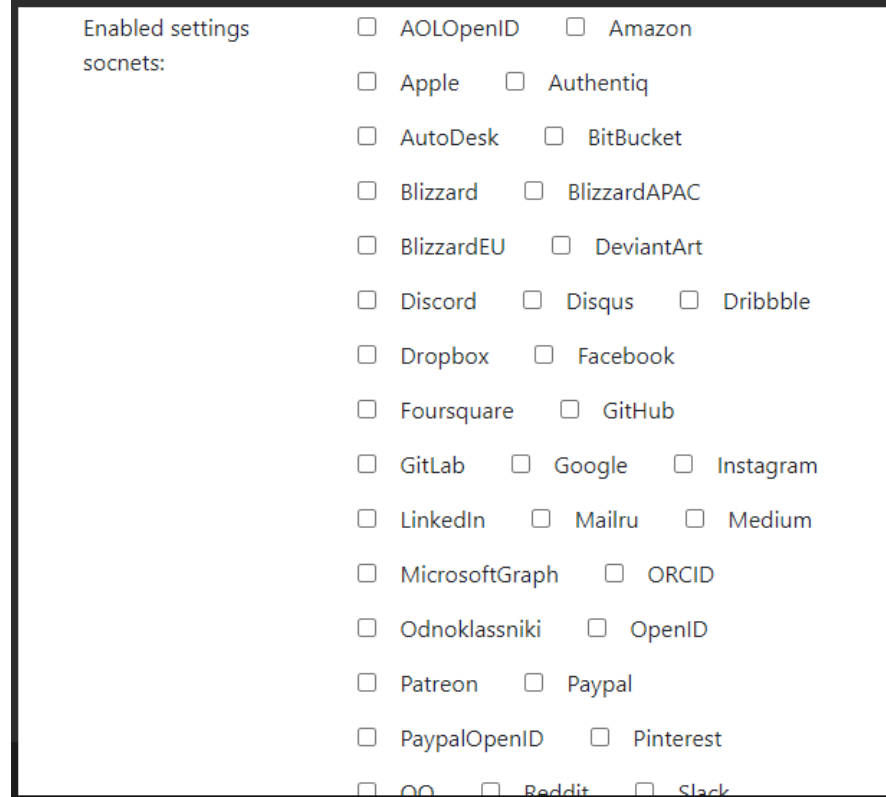

The screenshot shows the 'Settings' tab for 'bit.ly'. The 'GitLab' section is active, and the 'GitLab login allowed?' checkbox is checked. Below this, there are two yellow warning boxes: 'You need to set GitLab Application ID' and 'You need to set GitLab Application secret'. A 'More/Less...' button is visible. The form contains the following fields:

- 1. GitLab Application ID:
- 2. GitLab Application secret:
- 3. GitLab API (or Graph) version - NOT YET:
- 4. GitLab site name:
- 5. GitLab site image:
- 6. GitLab auto-create user?:

Enter the required information (check the samples below)

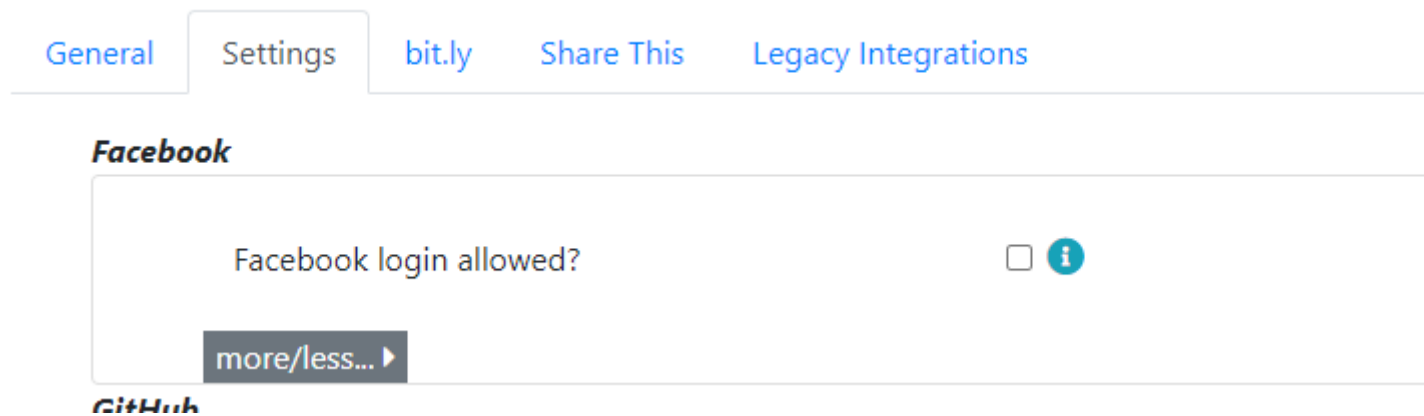

In the Control Panel **User Settings** tab **User Settings** you also need to enable "User preferences screen".

First, choose your social network(s). To do this, go to **Settings** -> **Users & Community** -> Social networks -> General tab or `tiki-admin.php?page=socialnetworks#content_admin1-1` and make your choice(s) then validate.

Secondly, still in "Configure social network integration", go to the Settings tab (tiki-admin.php?page=socialnetworks#content\_admin1-2), your choices will be visible in well framed zones above. In each zone check the box **YourSocialNetwork login allowed ?** by doing that a button leading to your site will be available on the login page but will not be functional.

Thirdly, turn in each area click on the more/less button...

# Parameters to manage the users and their account or items

You will have to complete different parameters. The mandatory fields are YourSocialNetwork Application ID and YourSocialNetwork Application secret.

For a successful experience in Tiki, we advise you to check the boxes below.

YourSocialNetwork auto-create user?

YourSocialNetwork user prefix to auto-create

YourSocialNetwork auto-create user email?

YourSocialNetwork auto-create user tracker item?

YourSocialNetwork auto-create user name(s)?

Facebook login allowed?	<input type="checkbox"/>	
<a href="#">more/less...</a>		
1. Facebook Application ID	<input type="text"/>	
2. Facebook Application secret	<input type="text"/>	
3. Facebook API (or Graph) version - NOT YET	<input type="text"/>	
4. Facebook site name	<input type="text"/>	
5. Facebook site image	<input type="text"/>	
6. Facebook auto-create user?	<input checked="" type="checkbox"/>	
7. Facebook user prefix to auto-create	<input type="text" value="Face_"/>	
8. Facebook auto-create user email?	<input checked="" type="checkbox"/>	
9. Facebook auto-create user tracker item?	<input checked="" type="checkbox"/>	
10. Facebook auto-create user name(s)?	<input checked="" type="checkbox"/>	

# Note

The field YourSocialNetwork user prefix to auto-create is filled with the initial of the network you have chosen. So the username will be the combination of the value in this field and a sequence of numbers that will be assigned to it.

This will automatically create a user in Tiki that will be in the default register group.

For this to work properly you would need to enable the User preferences screen option, you can find this by going to

Settings -> User Settings tab -> User preferences screen

([http://example.org/tiki-admin.php?page=user#contentadmin\\_user\\_setting-1](http://example.org/tiki-admin.php?page=user#contentadmin_user_setting-1)).

# Troubleshootings

# TikiHybrid\_construct : this site is not registered

 Error

TikiHybrid\_construct: this site is not registered with

TikiHybrid\_construct : this site is not register with it means that you haven't insert the ID and the secret code of your Application yet.

# TikiHybrider error : A valid Callback url is required

 Erreur

TikiHybrid provider error: A valid callback url is required.

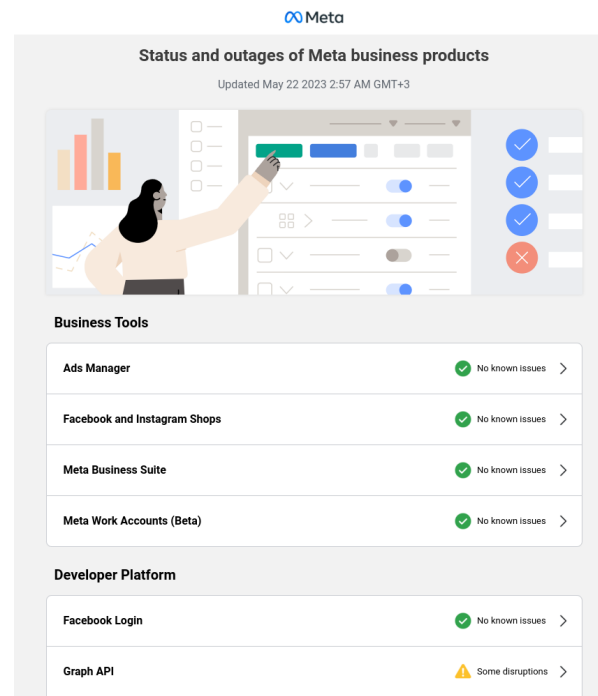

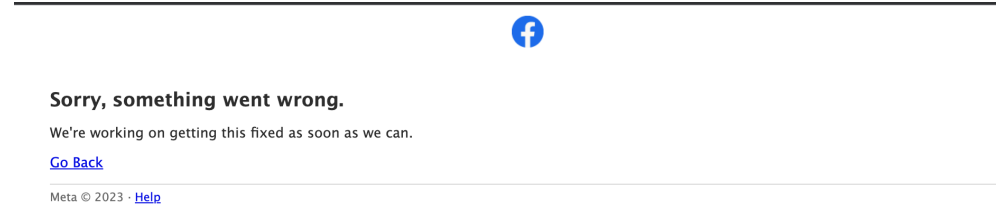

TikiHybrider error : A valid Callback url is required means the path in the socnets Login Base Url field in Settings -> Users & Community -> Social networks -> Settings is not correct. Make sure to have in this field the value `https://domain name> tiki-login_hybridauth.php?provider=`

# Facebook login "sorry something went wrong"

If you get an error message from Facebook like "sorry something went wrong", then most likely Facebook login GraphAPI is semi-dead.

You can check it via:

# Samples

## *Authentication for any Social Network*

Once enabled go to the section YourSocialNetwork on the Social Network settings tab.

There you will need to fill several fields to allow your users to login with their YourSocialNetwork credentials.

- YourSocialNetwork Application ID
- YourSocialNetwork Application secret
- Enable YourSocialNetwork Auto-create user
- Enable YourSocialNetwork Auto-create user email
- Enable YourSocialNetwork Auto-create user name(s)

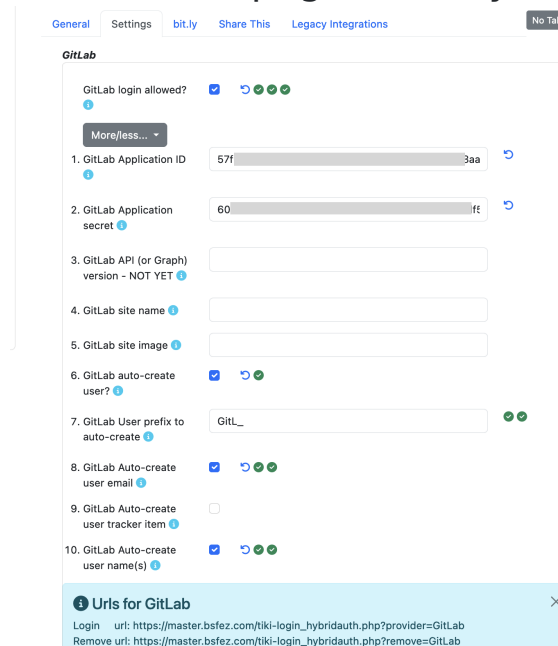

# Authentication using Gitlab

Once enabled you need to enter values for required fields from YourSocialNetwork.

To find and set your Gitlab authentication you will need to create an application and copy the information.

Go to Gitlab, login and enter in your Profile, "User Settings" => Applications.

There enter a name for your application (any name). Keep the checkbox "Confidential" checked. In the list of "Scopes" select "api". Once you save you will be redirected to a page where you will find the value for the fields listed above.

The screenshot shows the GitLab application settings page. The page has tabs for "General", "Settings", "bit.ly", "Share This", "Legacy Integrations", and "No Tabs". The "Settings" tab is active. The page title is "GitLab". The settings are as follows:

- GitLab login allowed?  [More/less...](#)
- 1. GitLab Application ID: 57f3aa
- 2. GitLab Application secret: 60ff
- 3. GitLab API (or Graph) version - NOT YET
- 4. GitLab site name
- 5. GitLab site image
- 6. GitLab auto-create user?
- 7. GitLab User prefix to auto-create: GitL\_
- 8. GitLab Auto-create user email
- 9. GitLab Auto-create user tracker item
- 10. GitLab Auto-create user name(s)

At the bottom, there is a section titled "Urls for GitLab" with the following information:

- Login url: [https://master.bsfez.com/tiki-login\\_hybridauth.php?provider=GitLab](https://master.bsfez.com/tiki-login_hybridauth.php?provider=GitLab)
- Remove url: [https://master.bsfez.com/tiki-login\\_hybridauth.php?remove=GitLab](https://master.bsfez.com/tiki-login_hybridauth.php?remove=GitLab)

Once validated the Tiki settings for YourSocialNetwork will show 2 URL.

Go back to your Gitlab settings and indicate them as the "Redirect URI" or "Callback URL"

## Congratulations

This is the default homepage for your Tiki. If you are seeing this page, your installation was successful. You can change this page after logging in. Please review the [wiki syntax](#) for editing details.

## Get started.

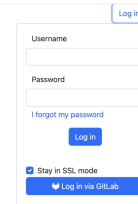

To begin configuring your site:

1. Log in with your newly created password.
2. Manually Enable specific Tiki features that you didn't enable with the Admin wizard.
3. Run Tiki Profiles to quickly get up and running.

## Need help?

For more information:

- [Learn more about Tiki](#).
- [Get help](#), including the [official documentation](#) and [support forums](#).
- [Join the Tiki community](#).

The screenshot shows the Tiki login form. It has a "Log in" button at the top right. The form fields are:

- Username
- Password
- [I forgot my password](#)
- Stay in SSL mode
- Log in via GitLab

# Authentication using Facebook login

Once enabled you need to enter values for required fields from YourSocialNetwork.

First you must have a Facebook developer account, login and go to your app page there :

<https://developers.facebook.com/apps/>

On your app page, Click on the **Create app** button. Click on the **Set up Facebook login** radio button and click on **Next**.

Select for which platform you want to create your app, **Website** and for the question "Are you building a game?" answer no and click on **Next**.

Give a name for your app in the field "App contact email" if different from you Facebook Developer Account, change the "App contact email" and click on **Create app**.

You will be asked to enter your Facebook credentials to validate. Once created you will be redirected to a new page.

On the left (or right) menu, go to **Settings** -> **Basics**. There you will find your "Facebook Application ID" and "Facebook Application secret". Once there, in the **app domains** field enter your Tiki domain where you will use the Facebook login. IE: "example.org"

If you enabled the option "YourSocialNetwork Auto-create user email" you need to modify your Facebook app permissions to allow your app to read a person's primary email address.

On the Meta For Developer site go to your app -> **Use cases** -> **Authentication and account creation** click on "Edit" and add the email permission.
