

There are several ways to import database-like structures (Trackers with their Tracker fields) and data (Tracker items) into your website. This page will give you a quick overview of the related capabilities in Tiki.

Import Trackers

There are several ways to import a tracker, its fields and its data:

1ST WAY: IMPORT TRACKER USING ITS STRUCTURE (OWN CODE)

The screenshot shows the Tiki 'Trackers' management interface. At the top, there's a 'Trackers' header with a search icon and a 'No Tabs' button. Below the header, there are two tabs: 'Trackers' and 'Duplicate/Import Tracker'. The 'Duplicate Tracker' section is active and contains a form with the following elements:

- Name:** A text input field.
- Tracker:** A dropdown menu with 'Dynamic tracker example' selected.
- Duplicate categories
- Duplicate permissions
- Duplicate:** A button.

The 'Import' section is also visible and contains:

- Import Structure:** A dropdown menu.
- Raw data:** A large text area for pasting data.
- Preserve tracker ID
- Note:** A text area with the instruction: 'Use "Tracker -> Export -> Structure" to produce this data.'
- Import:** A button.

Click to expand

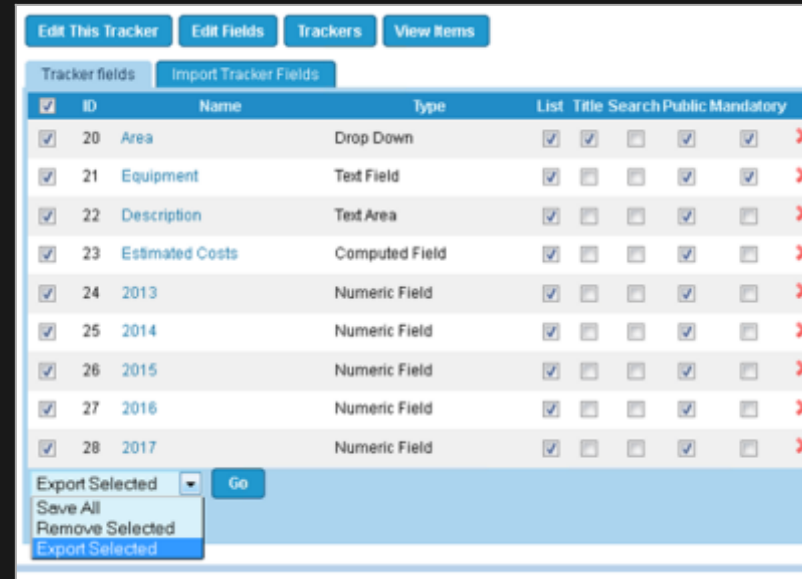

2ND WAY: IMPORT TRACKER USING PROFILE/YAML CODE

Click to expand

EXPORT AND IMPORT OF TRACKER FIELDS

In the **Edit Fields** page (/tiki-admin_tracker_fields.php?trackerId=) you need to select all fields you want to export with the checkboxes, then at the bottom there is a dropdown where you select **Export Selected**.

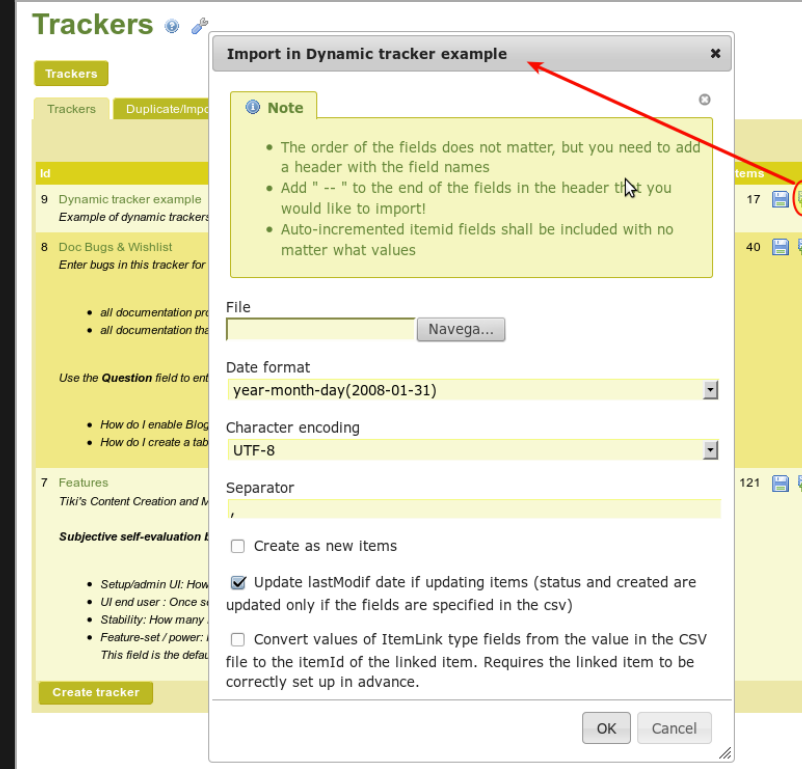

This will open a window with the code you need to copy, then paste in to the **Import Tracker Fields** tab.

IMPORT TRACKER DATA

To import data, you can import data through the other interface:

Click to expand

In order to get the right syntax for the file, you can export your tracker data first, so that you can see an example of how columns are data are formatted. See [Export Trackers](#).

USE FROM REMOTE SOURCES

You can alternatively use tracker data from remote sources through the **ODBC** read/write support added in [Tiki23](#).

See [ODBC](#)
