

# Import Trackers

There are several ways to import a tracker, its fields and its data:

# 1st Way: Import Tracker using its structure (own code)

The screenshot shows a web application interface for 'Trackers'. At the top, there's a header with the title 'Trackers' and a 'No Tabs' indicator. Below the header, there are two tabs: 'Trackers' and 'Duplicate/Import Tracker'. The 'Duplicate Tracker' section is active and contains a form with the following elements:

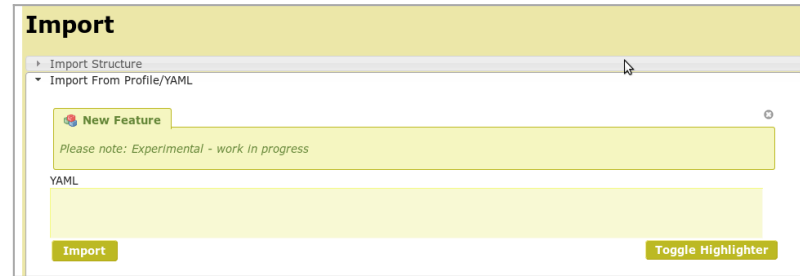

- Name:** A text input field.
- Tracker:** A dropdown menu with 'Dynamic tracker example' selected.
- Duplicate categories
- Duplicate permissions
- Duplicate:** A button.

The 'Import' section is also active and contains the following elements:

- Import Structure:** A dropdown menu.
- Raw data:** A large text area for pasting data.
- Preserve tracker ID
- Note:** A text box containing the instruction: 'Use "Tracker -> Export -> Structure" to produce this data.'
- Import:** A button.

# Export and Import of Tracker Fields

On the **Edit Fields** page (/tiki-admin\_tracker\_fields.php?trackerId=) you need to select all fields you want to export with the checkboxes, then at the bottom there is a dropdown where you select **Export Selected**.

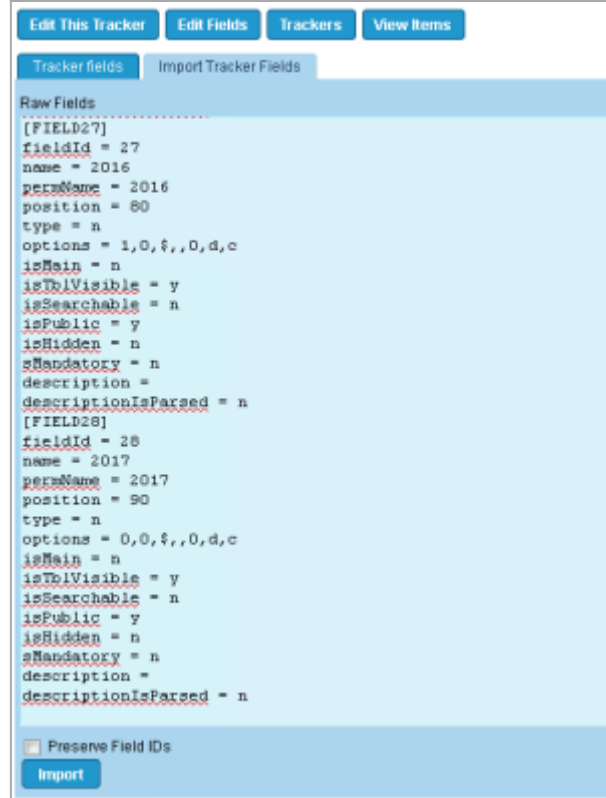

The screenshot shows the 'Edit Fields' page with a table of tracker fields. The table has columns for ID, Name, Type, List, Title, Search, Public, Mandatory, and a delete icon. All fields are selected with checkboxes. At the bottom, there is a dropdown menu with 'Export Selected' selected, and a 'Go' button next to it.

This will open a window with the code you need to copy, then paste in to the **Import Tracker Fields** tab.

# Import Tracker data

To import data, you can import data through the other interface:

In order to get the right syntax for the file, you can export your tracker data first, so that you can see an example of how columns and data are formatted. See [Export Trackers](#).

# Use from remote sources

You can alternatively use tracker data from remote sources through the **ODBC** read/write support added in Tiki23.

See [ODBC](#)
