

# Improve Tracker Forms

You can improve tracker forms enabling an experimental jquery user interface library called "**Chosen**"

# Enable the feature

You can enable the feature in:

**Admin home > Features > Interface (tab) > jQuery plugins and add-ons > Experimental > jQuery-ui Chosen Menu**

The screenshot shows the 'Interface' tab of the 'Features' admin panel. The 'jQuery plugins and add-ons' section is expanded, showing various plugins and their status. The 'jQuery-ui Chosen Menu' checkbox is highlighted with a red box, indicating it is the feature being enabled. The 'Experimental' section is also visible, showing 'jQuery Infinite Carousel' and 'jQuery Sortable Tables'.

# Drop downs

You can choose a value from a dropdown box by selecting the items in the list through scrolling down, as usual, or you can nowadays filter the list values based on the text you type at the top.

The image shows a web form with several fields. The 'Importance' field has a dropdown menu open, displaying a search bar at the top and a list of options below. The options are numbered 1 through 8, with '1 low' at the top. The option '4' is highlighted in blue. The form also includes a 'Subject' field with a red asterisk, an 'Easy to solve?' field, a 'Feature' field, and a 'Category' field with a red asterisk. At the bottom, there are checkboxes for 'Tiki Version' 10.x and 11.x. The background of the form is light gray, and the dropdown menu is white with a gray border.

# Multiple selection

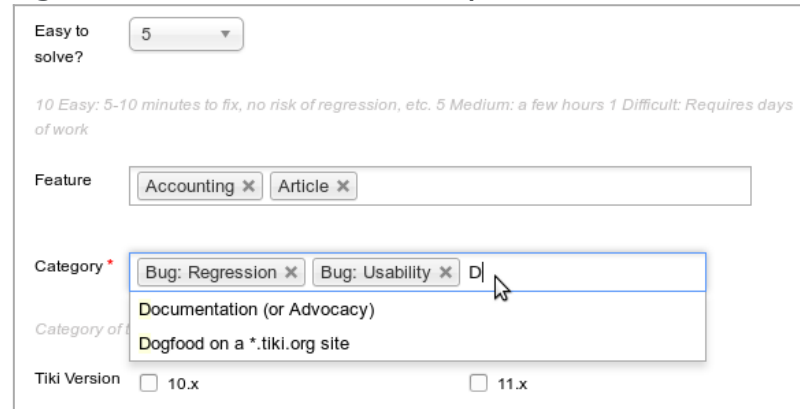

Similarly, a section to allow multiple selection of items can be shown in a small but enhanced dropdown box, which allows the user to select one or many of the options, remove them from the list in the text field at the top:

The screenshot shows a web form with several input fields. At the top, there is a label 'Easy to solve?' followed by a dropdown menu showing the number '5'. Below this is a line of small, italicized text: '10 Easy: 5-10 minutes to fix, no risk of regression, etc. 5 Medium: a few hours 1 Difficult: Requires days of work'. The next field is labeled 'Feature' and contains two tags: 'Accounting' and 'Article', each with a small 'x' icon for removal. Below that is a field labeled 'Category' with a red asterisk. It contains two tags: 'Bug: Regression' and 'Bug: Usability', also with removal icons. A mouse cursor is pointing at the 'Bug: Usability' tag. A dropdown menu is open below the 'Category' field, showing a list of options: 'Blocker' (highlighted in blue), 'Bug: conflict of two features (each works well independently)', 'Bug: Consistency', 'Bug: Error', 'Bug: Security', 'Community projects', 'Documentation (or Advocacy)', 'Dogfood on a \*.tiki.org site', 'Feature request', and 'Incident'. To the left of the dropdown menu, the text 'Category of' and 'Tiki Version' are visible. At the bottom of the form, there are two checkboxes: '8.x' and '9.x'.

# Filtering displayed options by typed text

Additionally, you can also filter the values displayed in the dropdown so that only those matching your typed text are shown in the list (only the ones starting with "D" in the example below: Documentation and Dogfood a \*.tiki.org site).

The screenshot shows a search filter interface with the following elements:

- Easy to solve?**: A dropdown menu with the value '5' selected. Below it, a small text note reads: "10 Easy: 5-10 minutes to fix, no risk of regression, etc. 5 Medium: a few hours 1 Difficult: Requires days of work".
- Feature**: A text input field containing two tags: "Accounting" and "Article".
- Category \***: A text input field containing two tags: "Bug: Regression" and "Bug: Usability". To the right of the input field, the letter "D" is typed, and a dropdown menu is open showing two options: "Documentation (or Advocacy)" and "Dogfood on a \*.tiki.org site". A mouse cursor is pointing at the "D" in the input field.
- Category of**: A text input field that is currently empty.
- Tiki Version**: Two checkboxes, "10.x" and "11.x", both of which are unchecked.
