Module calendar_new

Introduced in version 3.0

This Module adds a small calendar that allows to see the events of the current month, basic data in the calendar box, and the other info on a hover box while passing the mouse over.

Parameters

Includes a calendar or a list of calendar events.

Go to the source code

Preferences required: feature_calendar

Parameters	Accepted Values	Description	Default	Since
`calIds`		If set to a list of calendar identifiers, restricts the events to those in the identified calendars. Identifiers are separated by vertical bars ("|"), commas (",") or colons (":"). Example values: "13", "4,7", "31:49". Not set by default.		
`month_delta`	int	Distance in month to the month to display. A distance of -1 would display the previous month. Setting this option implies a calendar view type with a month time span. Example values: 2, 0, -2, -12.		
`viewmode`	word	If in calendar (or "table") view type, determines the time span displayed by the calendar. Possible values: year, semester, quarter, month ,week, day. A user changing this time span in the calendar can change the time span the module displays for him.	month	
`linkall`	word	y|n	n	
`showaction`	word	y|n	y	
`viewnavbar`	word	y|n|partial	y	
`viewlist`	word	Determines how to show events. Possible values: table, list.	table	
`viewmodelink`	word	week|day	week	

Usage

The assigned module looks like this:

If you change the main Tiki calendar view (for example, semester mode), the calendar module will be updated accordingly.

ou can specify if you want to see the events in a popup for each day. The calendars are specified in the params box c

admin->modules

calIds[]=1&calIds[]=2

To see the calendar 1 and the calendar 2

Be careful: permissions are not checked on the calendar
