

Module calendar_new

Introduced in version 3.0

This Module adds a small calendar that allows to see the events of the current month, basic data in the calendar box, and the other info on a hover box while passing the mouse over.

Parameters

Includes a calendar or a list of calendar events.

[Go to the source code](#)

Preferences required: feature_calendar

Parameters	Accepted Values	Description	Default	Since
calIds		If set to a list of calendar identifiers, restricts the events to those in the identified calendars. Identifiers are separated by vertical bars (" "), commas (",") or colons (":"). Example values: "13", "4,7", "31:49". Not set by default.		
month_delta	int	Distance in month to the month to display. A distance of -1 would display the previous month. Setting this option implies a calendar view type with a month time span. Example values: 2, 0, -2, -12.		
viewmode	word	If in calendar (or "table") view type, determines the time span displayed by the calendar. Possible values: year, semester, quarter, month ,week, day. A user changing this time span in the calendar can change the time span the module displays for him.	month	
linkall	word	y n	n	
showaction	word	y n	y	
viewnavbar	word	y n partial	y	
viewlist	word	Determines how to show events. Possible values: table, list.	table	
viewmodelink	word	week day	week	

Usage

The assigned module looks like this:

The screenshot shows a calendar module with a grid for the month of March. The days of the week are labeled S, M, T, W, T, F, S. The dates are arranged in a grid. A mouse cursor is hovering over the date 30. Below the calendar, there is a popup event box with the following text:

10:29 > 10:29
- SESSIÓ FTIC, 17:30 CEST - 20:30 CEST

If you change the main Tiki calendar view (for example, semester mode), the calendar module will be updated accordingly.

You can specify if you want to see the events in a popup for each day. The calendars are specified in the params box of the module configuration:
admin->modules

`callIds[]=1&callIds[]=2`

To see the calendar 1 and the calendar 2

Be careful: permissions are not checked on the calendar
