

# Module last\_modif\_pages

This module displays the most recently edited [wiki pages](#), in reverse chronological order, and provides a link to each page.

## PARAMETERS

List the specified number of pages, starting from the most recently modified.

[Go to the source code](#)

*Preferences required:* feature\_wiki

### Parameters

### Accepted Values

absurl

---

## Description

If set to "y", some of the links use an absolute URL instead of a relative one. This can avoid broken links if the module is to be sent in a newsletter, for example.  
Default: "n".

<b>Default</b>	<b>Since</b>
----------------	--------------

action

comment

date

url

user

maxlen

int

If set to "y", show action performed on the pages. ( y / n )

If set to "y", show the descriptions of the change made on the pages. ( y / n )

If set to "y", show page edit dates. ( y / n )

Target URL of the "...more" link at the bottom of the module. Default: tiki-lastchanges.php

If set to "y", show who edited the pages. ( y / n )

Maximum number of characters in page names allowed before truncating.

maxcomment

int

days

int

show\_namespace

---

Maximum number of characters in comments allowed before truncating.

Number of day in past to look for modified pages.

Defaults to "356"

Show namespace prefix in page names. ( y / n )

---

y

## USAGE

You will see it listed at "Admin > Modules > Assign new module > Module Name (drop down)" (**tiki-admin\_modules.php**).

You can assign a this [Module](#) to a lateral column (See [Module Admin](#) page if needed), or you can include it within a wiki page, using the [PluginModule](#).

---

```
{MODULE(module=>last_modif_pages) /}
```

See [PluginModule](#) for additional parameters that can be used.

The assigned module looks like this:

1. [Real User Measurement](#)
2. [PluginSwiper](#)
3. [Nginx](#)
4. [PluginList output control block](#)
5. [Cypht](#)

[...more](#)
