

# Module Share

"Display links to different Social Network function (like, tweet, share) linked to the user Social Network registered account or the App set for the site."

⚠ Warning

*This module is in finalization phase and require some test and tweak. It should replace all the other Share feature and options that have been added till Tiki Wiki 9.*

## USAGE

You can add the module using the Admin Module menu, inserting it in a template or inside the code of Wiki page. The module can be use right away without activating the "old" Share feature in Admin -> Feature.

⚠ Warning

This module is still in progress

"On Facebook selecting a friend is a little tricky and require several attempt"

"The picture selected is not selectable - first found on page"

"The shared title is the metatag page title - where description is used as title is show duplicate text"

"Sharing an article require module improvement - article image and heading are not part of the sharing message"

*Using the Insert Module from the toolbar is actually not supported*

Module
