

Paypal

Native

The goal, for Tiki5, is to support membership payments via PayPal. So you join a group (ex.: members) and you are sent to PayPal, you pay your dues, and PayPal sends you back a confirmation and 1 year is added to your membership.

This will permit to offer paid subscriptions to access restricted sections in a site.

With HTML code

PayPal will provide you with some HTML code, for example, a PayPal button. If you want to use this in a wiki page, please use PluginHTML.

Alternatively, you can use the Dynamic Content System. One thing to watch out for: You may have to remove a line-break from the code provided by PayPal. Because PayPal line breaks are changes to "br" html tags by Tiki parser and it breaks the link to PayPal.
