Overview

Use this tab to configure performance settings for the wiki feature

To Access

From the Performance Admin Panel page, click the **Performance** tab.

Option	Description	Default
Cache wiki pages (global)	Enable page cache globally for wiki pages.  <i>Wiki cache reduces server load but can cause some empty pages and other issues when using wiki plugins. Use only if necessary; it may be better to use an individual wiki cache for only the pages that require it.</i> ☰ no cache 1 minute 5 minutes 10 minutes 15 minutes 30 minutes 1 hour 2 hours	2 hours
Individual wiki cache	Allow users to change the duration of the cache on a per-page basis.	Enabled
Page ranking reload probability	Calculation of page rankings is a resource-intensive task that cannot be performed at every page load. It will be calculated at random page loads based on a dice roll. This option indicates the number of faces on the dice. Larger numbers lead to reduced resource use, but less-accurate ranking.	1000
Last modified header	Allow to ensure that a wiki page has not changed since the previous caching. This option helps clients (browsers, crawlers) to use less bandwidth and improve crawling and indexing of wiki pages.	Disabled
