

Plugin Fade

Use this [wiki plugin](#), introduced with [Tiki3](#), to create a link that shows/hides initially hidden content using a fade-in/fade-out effect. In [Tiki16](#) a new parameter `bootstrap` ('y' or 'n') was added, to generate bootstrap collapsible box instead of the previous html code.

PARAMETERS

Create a link that shows/hides initially hidden content
*Introduced in Tiki 3. Required parameters are in **bold**.*

[Go to the source code](#)

Preferences required: `wikiplugin_fade`

Parameters

(body of plugin)

label

text

class

text

Accepted Values

Description

Content of the hideable zone (in Wiki syntax)

Label for link that shows and hides the content when clicked

Apply custom CSS class.

Default	Since
Unspecified label	3.0
	16.0

icon

(blank)

y

n

bootstrap

(blank)

y

n

hide_speed

show_speed

Arrow icon showing that content can be hidden or shown.

Use Bootstrap collapsible box

Speed of animation in milliseconds when hiding content (`200` is fast and `600` is slow. `1000` equals 1 second).

Speed of animation in milliseconds when showing content (`200` is fast and `600` is slow. `1000` equals 1 second).

7.0

n

16.0

EXAMPLES

BASIC

This code:

```
{FADE(label="Label to display on first display", bootstrap="y")} Wiki syntax containing the text to display. This text can be very long and can contain wiki syntax, images, etc. {FADE}
```

Would produce:

Label to display on first display 

Wiki syntax containing the text to display. This text can be very long and can contain wiki syntax, images, etc.

WITH ICON AND SPEED PARAMETERS SET

This code:

```
{FADE(label="Click me!" icon="y" show_speed="900" hide_speed="fast" bootstrap="y")} This is my favorite hat: {img attId=39} {FADE}
```

Would produce on this site:

Click me! 

This is my favorite hat:
