Plugin Img

*Introduced in Tiki3* and improved over the years.

Use this wiki plugin to display an image either inline or with styling and resizing. Images can be identified by URL address and by ID for images in Tiki file or image galleries or attachments on the Tiki site. The image can be styled and resized and can be included in a styled box with the image description or name displayed. Images can be set to enlarge on mouseover, or via colorbox, or in a separate web page.
Usage and Parameters

Here are some quick examples working since version 4:

Commit screenshot

Click here for the code...

Click here for the code...

Note: mouse over or tap (on touch devices) image to bring up a popup

Note: random image picked from a file gallery with styled frame
Below are the parameters for this plugin, categorized into tabs:

*Introduced in Tiki 3. Required parameters are in **bold**.*

*Preferences required: wikiplugin_img*

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Accepted Values</th>
<th>Description</th>
<th>Default</th>
<th>Since</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Valid attachment IDs separated by commas or | Numeric ID of an image attached to a wiki page (or a comma-separated list).
| fgalId | digits | Numeric ID of a file gallery. Displays all images from that gallery. | 8.0 |
| randomGalleryId | digits | Numeric ID of a file gallery. Displays a random image from that gallery. | 5.0 |
| Valid image IDs separated by commas or | Numeric ID of an image in an image gallery (or a comma-separated list of IDs). | 4.0 |
Valid file IDs separated by commas or | numeric ID of an image in a file gallery (or a comma-separated list of IDs).
Sort by database table field name, ascending or descending.

Examples:

fileId_asc or name_desc.

created_desc 8.0
Introduced in Tiki 3.
Preferences required: wikiplugin_img

<table>
<thead>
<tr>
<th>Parameters</th>
<th>Accepted Values</th>
<th>Description</th>
<th>Default</th>
<th>Since</th>
</tr>
</thead>
<tbody>
<tr>
<td>link</td>
<td>url</td>
<td>Causes the image to be a link to this address. Overrides <code>thumb</code> unless <code>thumb</code> is set to <code>mouseover</code> or <code>mousetick</code></td>
<td>3.0</td>
<td></td>
</tr>
<tr>
<td>usemap</td>
<td>text</td>
<td>Name of the image map to use for the image.</td>
<td>3.0</td>
<td></td>
</tr>
<tr>
<td>rel</td>
<td>text</td>
<td>Specifies the relationship between the link image and the target. Enter <code>box</code> to cause the image to enlarge in a popup when clicked.</td>
<td>3.0</td>
<td></td>
</tr>
</tbody>
</table>
thumb (blank)| y| box| mouseover| mousesticky| popup| download| browse| browsepopup| zoombox| zoom

 Makes the image a thumbnail that enlarges to full size when clicked or moused over (unless "link" is set to another target). "browse" and "browsepopup" only work with image gallery and "download" only works with file gallery or attachments.

 button (blank)
 (blank)
 y
 popup
 browse
 browsepopup
 download

 Adds an enlarge button (magnifying glass icon) below the image for use together with thumb. Follows thumb settings unless thumb is set to mouseover or mousesticky (or overridden by link), otherwise button settings are followed, operating as described above for thumb.

 Introduced in Tiki 3.
 Preferences required: wikiplugin_img

</tbody>
</table>
Examples
Image aligned right and hyperlinked

This code:

```
{img attId="39" imalign="right" link="https://tiki.org" alt="Panama Hat") This text after the img code will nevertheless be on the left because the image is right aligned. The text will also wrap around the image since the imalign parameter "floats" the image.
```

Would produce this on this site:

This text after the img code will nevertheless be on the left because the image is right aligned. The text will also wrap around the image since the imalign parameter "floats" the image.

See Controlling Wrapping if you need to further control how the text or other elements are wrapping around your image.
Add several images in a row

This code:

```
{img attId="57|58|59" desc="desc" alt="Sample Images" thumb="y" stylebox="float: left; margin-right:10px"}
```

This might not be possible with all versions earlier than Tiki 4.

*Would produce this on this site:*

- Apples
- Oranges
- Apples
- and
- oranges
Different image for a thumbnail

Below is an example of using a thumbnail image (apples) that is different than the image brought up when the thumbnail is clicked (oranges):

Would produce this on this site:
PLEASE NOTE

This parameter requires Preference feature jQuery Zoom enabled (Preference name: feature_jquery_zoom)

Below is an example of using a thumbnail image (apples) that enlarges when moused over:

```
{img attId="57" thumb="zoom"}
```

Would produce this on this site:
Add the parameter `thumb="zoombox"`. Then you will be able to get image magnification, when the source image is bigger than the size shown on screen. Full size image appears with zoom option in a "Colorbox" overlay when thumbnail is clicked.

This parameter requires Preference feature jQuery Zoom enabled (Preference name: feature_jquery_zoom)

Below is an example of using a thumbnail image (pears) that enlarges in the Colorbox modal overlay:

```
[img src="img/wiki_up/393px-Pears.jpg" thumb="zoombox"]
```

Would produce this on this site:
Avoid images being resized and relocated in Slideshows

This S5 slideshow engine in Tiki (see PluginSlideShow) resizes and relocates images automagically by default, in order to allow quickly show content, and a small thumbnail of the image at the upper right corner of the slide.

If you prefer to have the image shown at its original size and position, you can add the parameter `class="fixedSize"` to your `img` call. Example:
This code would show the image as a small thumbnail in the upper right corner of the slide:

```html
{img
src="display2"
rel="box[g]"
width="500"}
```

code to allow resizing and relocating the image

But this code would allow the image to be shown at the original size of 500px and at the same position where this code was written.

```html
{img
src="display2"
rel="box[g]"
width="500"
class="fixedSize"}
```

code to keep original size and position
Multi-resolution images (Retina display)

Added in Tiki18. See Multi-resolution images
When the **SEFURLs** feature is enabled you can enter "displayID" (where ID is the number of the image in the File Gallery) in the image source field (the `src` param).
