Plugin Kaltura

Introduced in Tiki4, with a major revamp in Tiki10. (New params: Kaltura Video Player ID, Width, Height, Align, Float, Add Media Button Label)

Use this wiki plugin to display a video on a wiki page that has been created or edited through the Kaltura feature, which allows videos to be edited collaboratively on the internet. Please see Video Editing for complete information on this feature. Videos are displayed with an html5 player, so that they can be viewed with some browsers in standard smartphones (e.g., Firefox on Android, and Safari on iPhone).

PARAMETERS

Display a video created through the Kaltura feature
Introduced in Tiki 4. Required parameters are in `bold`.
Go to the source code
Preferences required: wikiplugin_kaltura, feature_kaltura
