

# Plugin PDF

# Overview

To use the **PluginPDF** you must have installed and activated mPDF. It is used to change default Administration PDF Settings and use custom settings for any specific Tiki page. When we apply **PluginPDF** on any page, all settings made in the plugin take effect on all the pages of the PDF document produced. Edit the page which you want to convert to a PDF document. Click on the Question Mark on the right corner of the editor as shown in the diagram below to open Plugin Help Window. See also: [PluginPdftime](#)

**Introduced in Tiki 17**

It will open up the Help Window, click on “Plugin Help” and type in the Filter search box “PDF” and three plugins will appear in the list. Click on the icon before PluginPDF to open PluginPDF Options.

## Plugins

Note that plugin arguments can be enclosed with double quotes ("); this allows them to contain , or = or >.

 **PDFPage** *pdfpage* [?](#)

3 Insert page with new settings in pdf

 **PluginPDF** *pdf* [?](#)

For customized pdf generation, to override global pdf settings.

 **PluginPDF Page Break** *pdfpagebreak* [?](#)

Helpful to format PDF files created, plugin adds page break in PDF file generated.

You get to see the list of PDF Options here, if you do not change or use any of the options then default options setup from the admin panel will be used. If you modify any PDF settings here on the page using the plugin then the new settings will be used.

PluginPDF

**Print Friendly PDF** Default  
*Print friendly option will change theme background color to white and text /headings color to black. If set to 'n', theme colors will be retained in pdf*

**PDF Orientation** Default  
*Landscape or Portrait*

**PDF page size** Default  
*ISO Standard sizes: A0, A1, A2, A3, A4, A5 or North American paper sizes: Letter, Legal, Tabloid/Ledger (for ledger, select landscape orientation)*

**Generate table of contents** Default  
*Set if table of contents will be autogenerated before PDF content*

# PluginPDF Parameters

For customized PDF generation, to override global PDF settings.

*Introduced in Tiki 17.*

[Go to the source code](#)

*Preferences required: [wikiplugin\\_pdf](#)*

Parameters	Accepted Values	Description	Default	Since
coverpage_settings		Background color Page border Border color. Enter settings separated by  , sequence is important, leave blank for default. For example #fff 1 #000		
coverpage_text_settings		Heading Subheading Text Alignment Background color Text color Page border Border color. Enter settings separated by  , sequence is important, leave blank for default. For example {PAGETITLE} Tikiwiki Center #fff #000 1 #ccc		
coverpage_wiki		Name of the wiki page that will be used for the text of the coverpage.		
coverpage_image_settings		Enter the full URL.		

<code>footer</code>	Possible values: <code>HTML / Wiki Syntax / Plain text, 5</code> , <code>{DATE j-m-Y}</code> . For example: <code>{PAGETITLE} Center Text 5</code> , <code>Page 5 of {NB}</code> , . Set footer value as <code>off</code> , to remove footer from page		
<code>pagesize</code>	(blank)  Letter  Legal  Tabloid/Ledger  A0  A1  A2  A3  A4  A5  A6	ISO Standard sizes: A0, A1, A2, A3, A4, A5 or North American paper sizes: Letter, Legal, Tabloid/Ledger (for ledger, select landscape orientation)	
<code>password</code>		Secure confidential PDF with password, leave blank if password protected is not needed	
<code>background</code>		Enter a valid CSS color code.	
<code>background_image</code>		Enter the full URL.	
<code>watermark_image</code>		Full URL of watermark image	
<code>watermark</code>		Watermark text value, for example: Confidential, Draft etc.	
<code>autobookmarks</code>		Values H1-H6,separated by   <code>For example H1 H2 H3</code>	<code>h1 h2 h3</code>
<code>toc</code>	(blank) y n	Set if table of contents will be autogenerated before PDF content	<code>n</code>
<code>toclinks</code>	(blank) y n	Link TOC headings with content on PDF document	<code>n</code>
<code>orientation</code>	(blank) P L	Landscape or portrait	<code>P</code>
<code>header</code>		Enter Wiki Syntax / HTML code / Plain text. Possible values: <code>Custom HTML / Wiki Syntax / text, 5</code> , <code>{DATE j-m-Y}</code> , <code>Page 5 of {NB}</code> , <code>Left text  Center Text   Right Text</code> . Set header value as <code>off</code> , to turn off header from page	
<code>printfriendly</code>	(blank) y n	Print friendly option will change theme background color to white and text /headings color to black. If set to 'n', theme colors will be retained in pdf	
<code>margin_bottom</code>	digits	Numeric value, no need to add px. For example 10	10
<code>margin_footer</code>	digits	Only applicable if footer is set.Numeric value only, no need to add px. Warning: Footer can overlap text if bottom margin is not set properly	5

# Sample PluginPDF Code

```
{pdf pagesize="A4" toc="n" pagetitle="n" header=" Document Title || {DATE j-m-Y }"footer="Document  
Copyrights | www.example.org |6" margin_left="10" margin_right="10" margin_top="20"  
margin_bottom="20" margin_header="10" margin_footer="10" coverpage_text_settings=""  
coverpage_image_settings="http://example.org/filename.jpg" toc="y" toclinks="y" tocheading="Table of Contents  
toclevels="H1|H2|H3" }
```

# Margin Top & Margin Header

This needs to be configured correctly for the page contents and header contents appear without overlapping. Margin Top is the space between document top and the contents of the document. And Margin Header is the space between Header and the document top. Check the diagram below:

# Cover Page

This features allow users to add a cover page to their PDF comprising of a background image and text on top of it. There are two variables to set this up. This cover page is not visible on the TIKI page but will be added whenever a PDF is produced. Following is the image size guide to help design some great PDF cover pages.

# Image Size and Dimensions for Cover Page

Image Resolution: DPI / PPI 96

## Page Size

Letter

## Image Dimensions

816 x 1056 px

Legal

816 x 1344 px

Ledger

1056 x 1632 px

A0

3179 x 4494 px

A1

2245 x 3179 px

A2

1587 x 2245 px

A3

1123 x 1587 px

A4

794 x 1123 px

A5

559 x 794 px

A6

397 x 559 px

# Advanced Usage With PluginList

If you need to pass data from your content into the parameters for plugin PDF you can use markup like this. This example formats a footer for each page using tracker item data depending on the `itemId` parameter on the URL.

```
{LIST()} {filter type="trackeritem"} {filter field="object_id" content=""} {OUTPUT()}#{display  
name="tracker_field_id"} {display name="wikiplugin_pdf" format="wikiplugin" orientation="P" footer="footer"  
margin_bottom="20"} {OUTPUT} {FORMAT(name="footer")} {literal}#{display name="tracker_field_id"} - {displa  
name="tracker_field_title"} - {display name="creation_date" format="date"}| | AT {display  
name="tracker_field_building_text"}|10{/literal} {FORMAT} {ALTERNATE()}^No DSO data  
found^{ALTERNATE} {LIST}
```
