

# Introduction

PluginPDFpage is another wiki plugin for [mPDF](#). Its function is to customize page settings for PDF output of any specific page (also works over multiple pages).

[PluginPDF](#) sets parameters for the wiki page, while PluginPDFpage changes the parameters just for a specific blob of text.

An example of usage is to switch from portrait to landscape for one large table, and to change back after the table.

## PLUGIN PARAMETERS

Insert page with new settings in PDF

*Introduced in Tiki 18.*

[Go to the source code](#)

*Preferences required:* `wikiplugin_pdfpage`

---

## Parameters

(body of plugin)

---

**Accepted Values**

---

**Description**

Page Content

**Default**

**Since**

footer

pagesize

background

background\_image

(blank)| Letter| Legal| Tabloid/Ledger| A0| A1| A2| A3|  
A4| A5| A6

## SAMPLE PLUGINPDFPAGE CODE

---

```
{PDFPAGE(orientation="L" watermark="Landscape Page")} contents of the page that you want impacted by different parameters than the rest of the page {PDFPAGE}
```

Do not try to use like this:

---

```
{pdfpage orientation="L"}
```
