

Plugin Parameters

Introduced in Tiki7

Use this [wiki plugin](#) to display content based on URL parameters.

PARAMETERS

Display content based on URL parameters

*Introduced in Tiki 7. Required parameters are in **bold**.*

[Go to the source code](#)

Preferences required: `wikiplugin_param`

Parameters

(body of plugin)

Accepted Values

name

text

separator: `|`

Description

Wiki text to display if conditions are met. The body may contain `{ELSE}`. Text after the marker will be displayed if conditions are not met.

Names of parameters required to display text, separated by `|`.

Default	Since
----------------	--------------

	7.0
--	-----

value

text

source

(blank)

get

post

cookie

Value to test for. If empty then just tests if the named params are set and not "empty".

Source where the parameter is checked.

13.1

request 7.0

EXAMPLE

The following code checks the parameter named `productid` in the URL and displays the result.

```
{PARAM(name=productid value=1004)}productid is 1004{ELSE}productid is not 1004{PARAM}
```
