

# Plugin Profile

*Introduced in Tiki3*

Use this [wiki plugin](#) to add an install button for installing a profile. It allows a profile to be installed from anywhere, instead of only via the profile admin interface ( `tiki-admin.php?page=profiles` ).

Profiles are used to automate configuration of a site, turning on feature sets and permissions schemes and adding content. This way a site can be configured with a single click rather than 100s of clicks. See [profiles.tiki.org](http://profiles.tiki.org) for more information.

## PARAMETERS

Add a button for applying a profile.

*Introduced in Tiki 3. Required parameters are in **bold**.*

[Go to the source code](#)

*Preferences required:* `wikiplugin_profile`

Parameters	Accepted Values
------------	-----------------

<b>name</b>	text
domain	url

---

## Description

Name of the profile to be applied.

Profile repository domain. Default value is

`profiles.tiki.org`

---

<b>Default</b>	<b>Since</b>
	3.0
profiles.tiki.org	3.0

# LIMITATIONS

- It only installs the named profile, not its dependencies (if any)
- After applying the profile, it returns on the same page from which it was called (it means it ignores going to the Instructions page (if any))
- It doesn't have the edit plugin helper icon displayed (even if "Disable edit plugin icon (make plugin inline)" is not checked on `tiki-admin.php?page=textarea&cookietab=2`)

# EXAMPLES

*This code:*

```
{profile name="Personal_Blog_and_Profile"}
```

*Would produce (screenshot):*
