Use this wiki plugin to render characters as subscript text (slightly below the regular line of text and smaller). It is the equivalent of using tags in HTML.
Parameters

There are no parameters required - only the text between the `SUB` tags is needed.
Examples

BASIC EXAMPLE

This code,

This is regular text{SUB()} and this is subscript text{SUB}

Produces:

This is regular font and this is subscript

Example with Formatted Subscript
This code,

This is regular text \textsubscript{SUB()} 'and this is italic subscript'

Produces:

This is regular text \textsubscript{SUB} and this is italic subscript
