Plugin Tracker Prefill

Introduced in Tiki2

Use this wiki plugin for trackers to display a button with a link to a page containing a tracker plugin PluginTracker. In the parameters, you will be able to specify default values for some fields.

PARAMETERS

Create a button to prefill tracker fields
Introduced in Tiki 2. Required parameters are in `bold`.
Go to the source code
Preferences required: feature_trackers, wikiplugin_trackerprefill

EXAMPLE

{trackerprefill page="Order" label="Order" field1="2" value1="Shoes" field2="3" value2="10"}

The above syntax will create a button labelled "Order" that will link to `tiki-index_raw.php?page=Order&prefills=2:3&values[]=Shoes&values[]=10`
If the wiki page named "Order" contains a tracker plugin with 2 fields (2 and 3), the tracker form will prefill in the fields 2 and 3 values "Shoes" and "10".
