

Project Management

Tiki doesn't have a *checkbox* to activate a project management feature **but** can be used for wiki-based project management using a combination of tracker, wiki, categories and watch. A tutorial would be nice. Please see `dev:project management` for more ideas.

In the video, you see "How to plan a camping trip". Now, imagine hundreds of small teams coordinating via the wiki. Starting in Tiki5, group watches can be added to Categories.
