RPM Install

This is an installation guide.

You can find all available Tiki releases from the Download page if you do not find your version here.

Mandriva

Browse the Mandriva RPM repository to find your Tiki version.
Tiki RPM
Mapserver-php RPM for TikiMap
tikiwiki-mapdata RPM for TikiMap
After the installation of the RPM, point your browser to

`http://127.0.0.1/tikiwiki-/tiki-install.php`

to complete the installation. Read InstallTikiDoc from create a))MySQL((database.
You may want to create a symlink from tiki to tikiwiki-:

ln -s tikiwiki- tiki

RedHat

Fedora

Fedora CoreÂ 3

The trycky part, is to install the MySQL 4.1.
First, we start from a clean Fedora installation (with http server, and without Mysql). Update the system with up2date

[root@fedoraC3 ~] up2date -uv

?Question: that can't be all? 1. where can I download the rpm for fedora from? Could someone link that here perhaps?
