

Search Stats

If you enabled the [Search](#) feature, you can also enable the search statistics at "Admin home > Search > Search features > Search stats".

The screenshot shows the 'Search Results' configuration page in Tiki. It is divided into three main sections: 'Search type', 'Features', and 'Permissions'. In the 'Search type' section, 'MySQL Full-Text Search' is checked and highlighted with a green arrow, while 'Tiki-indexed Search' is unchecked. A note below states: 'Unless you have a reason to, you should use MySQL Full-Text Search feature instead.' In the 'Features' section, 'Search Bar' is checked with a note 'Requires MySQL Full-Text Search (OK)'. 'Referer Search Highlighting' is unchecked. 'Parse the results' is checked with a note 'May impact performance'. 'Search stats' is checked and circled in red, with a green arrow pointing to it. In the 'Permissions' section, there is an information icon and a note: 'Enabling these options will improve performance, but may show forbidden results.' Below this, 'Ignore individual object permissions' and 'Ignore category viewing restrictions' are both unchecked, with a note: 'Will improve performance, but may show forbidden results'.

Then, you can access them under "Admin > Search stats", which will lead you to "**tiki-search_stats.php**":
