

Using Machine Learning Models

After a model has been trained, it is ready to be used to make prediction on new data. Trying to use an untrained model will result in an error.

To use a model, open its action menu and click on **Use**.

Go to model use page

Tiki will then display the model's page for prediction. This page will include input fields for you to enter new data.

The screenshot shows the 'Use machine learning model Divorce Predictor' page in Tiki Wiki CMS Groupware. The page has a title bar with '+ New' and 'Manage' links. Below the title is a description: 'Predict whether a couple will stay married or get divorced.' and a note: 'Use this model by entering a sample information in the form below and execute a query against the trained model. This will produce results based on the chosen estimator and show you the most relevant matches or predict the result.' The form consists of five questions, each with a dropdown menu: Q1 (4), Q2 (2), Q3 (4), Q4 (5), and Q5 (2). Below the form is a note: 'The time I spent with my wife is special for us. (1-5) Eg. 4.'

Use model page

Fill in the fields and select the type of task you want model to perform. This will be either a probability or prediction

task. Either of the tasks is supported based on the model's underlying learning algorithm. After this, click on the **Submit** button to get result.

A success message will be displayed and result will appear right after the submit button.

Result success message

A screenshot of the 'Divorce Predictor' form. It contains four question fields: Q1 (3), Q2 (4), Q3 (1), and Q4 (2). Each field is followed by a descriptive sentence and a range in parentheses. For example, Q1 is 'I'm not the one who's wrong about problems at home. (1-5) E.g. 5.' Below the questions, there is a 'Type' section with two radio buttons: 'Probability (closest matches)' and 'Prediction'. The 'Prediction' option is selected. A blue 'Submit' button is located below the form. At the bottom, the text 'Result: married' is displayed and circled in red.
