Ustream Watershed Registration

If you don't have a Watershed account, you can find out more about it here.

Activate the feature

☒ Ustream Watershed

☐ Log errors to Tiki log

Configuration within Watershed

Set the webservice to point to tiki-watershed\_service.php on your site, and turn on Authentication Lock.

Watershed Wiki plugins

Use Wiki plugins WatershedBroadcaster, WatershedViewer and WatershedChat to embed your broadcaster, viewer or chat.

Basic tracker settings

Tracker

Information for each channel is stored in a tracker. Tracker item view/modify permissions will determine which channels users will be able to view or broadcast to respectively. You can find the Brand Id and Channel Code from the embed codes provided by Watershed, looking for the old variable which will be "brandid%2fchannelcode"

Tracker ID of Channel tracker:

Field ID of BrandId:

Field ID of ChannelCode:

Tracker

Information on archived clips are stored in a tracker. Tracker item view permissions will determine which archives users will be able to view. Note that recordings set to private in the broadcaster are not added to Tiki. Also, there is a delay for information to be received which could be quite long (30 min).

Tracker ID of Archive tracker:

Field ID of videoid:

Field ID of BrandId for Archive:

Field ID of ChannelCode for Archive:

Field ID of rtmpURL for Archive (url field type):

Field ID of &URL for Archive (url field type):

Archive settings (optional)

Field ID of Date string for Archive:

Field ID of Duration for Archive:

Field ID of Filesize for Archive:

Field ID of Title for Archive:

Field ID of Description for Archive (textarea field type):

Field ID of Tags for Archive (listtags field type):

Flash Media Encoder

Flash Media Encoder

This is only needed if you are using Flash Media Encoder for higher-quality broadcasting which support only shared secret authentication.

Flash Media Encoder shared secret:
