

Web Services

Since [Tiki3](#), there is a new [PluginWebservice](#) to manage web services, and an admin panel to set up the feature.

USAGE

See the following video for an introduction of Tiki webservice in [Tiki3](#)

ADMIN INTERFACE

Webservice Registration

Discover and register web services to allow direct use in wiki pages.

Enter the URL of a web services returning either JSON or YAML. Parameters can be specified by enclosing a name between percentage signs. For example: %name%. %service% and %template% are reserved keywords and cannot be used.

HOW TO REGISTER A WEB SERVICE

See [Webservice Registration](#)

HOW TO USE

See [PluginWebservice](#)
