Webservice Registration

Overvi	ew With this feature you can pull data from any JSON or SOAP enabled service, for example from Yahoo:	Related Topics • Webservi
To access		ce Plugin
	Click the Webservice Registration icon the Admin Panel or Access http://example.org/tiki-admin.php?page=webservices	• Bugs and Wishes
Note		
_	This feature is mainly useful for the Webservice Plugin	

Option	Description	Default
Neb services	Can receive web services via JSON or YAML.	Disabled
Default cache	Cache time in seconds to use if the webservice does not supply "max-age" or "no-cache" in the response.	300 second

Example

Webservice returning JSON.

1. In the "url" field enter:

```
http://luciash.eu/paypal_balance_conversion_in_json.php?amount_in=%amount_in%&
currency_in=%currency_in%&currency_out=%currency_out%
```

- 2. In the "Type" dropdown leave "REST" selected.
- 3. In the "Parameters" textarea fill in the parameters as:

%amount_in% %currency_in% %currency_out%

4. Click "Lookup" button.

Now you can test the parameters.

You should see 3 new fields appear where you can enter the values to test.

Enter:

- 1. amount_in: 2
- 2. currency_in: EUR
- 3. currency_out: USD

The returned data under the "Response Information" will be something like this:

Array ([amount_out_formatted] => 2.49 [from_currency_code] => USD [exchange_rate_formatted] => 1.24567) When tested you can save the Webservice under a name, e.g. paypalexchangerate (cannot contain anything else thar etters) by clicking the "Register" button. Now you have registered Webservice called "paypalexchangerate" which you can use in PluginWebservice.
