Tags: A tag is a mark in the current state of the Wiki. They can be used to save the Wiki at regular intervals and to recover the whole Wiki to a particular state if something disastrous occurred. To create a tag simply enter a tag name and click the **create** tag button. To restore a tag select one of the existing tags and click **restore** (*all your Wiki pages will be lost and the saved state for the wiki will be restored!*). Since tags can take a lot of space you can remove tags that you don't want to use by clicking the **remove** tag button after selecting the tag that you don't want to use anymore.

Comments

Wiki, [Change settings](#). **Default Number of Comments**: Enter the number of comments to show at a time. If a page contains more comments, Tiki will create NEXT/PREVIOUS links. (Default = 10) **Comments Default Ordering**: Specify how the comments are shown:

Points: Comments with the highest point value are shown first. (Default)

Newest First: The newest comments are shown first.

Oldest First: The oldest comments are shown first.

Field

Description

Default Number of Comments Enter the number of comments to show at a time. If a page contains more comments, Tiki will create NEXT/PREVIOUS links. (Default = 10)

Comments Default Ordering Specify how the comments are shown:

Points: Comments with the highest point value are shown first. (Default)

Newest First: The newest comments are shown first.

Oldest First: The oldest comments are shown first.

Wiki attachments preferences

Wiki attachments preferences allow you to manage how files are attached to wiki pages. You can choose to store attachments in the database or in a directory, and specify maximum file size.

Wiki attachments preferences are located in the **Wiki panel**. To access them, click on the **Wiki** tab in the top navigation bar, then click on the **Attachments** link in the sidebar.

The **Wiki attachments** section contains the following options:

- Wiki Attachments:** Specify if files can be attached to wiki pages.
- Use Database to Store Files:** If selected, files that are attached to wiki pages will be converted to BLOBs and stored in the Tiki database in the **tiki_wiki_attachments** table.
- Use a Directory to Store Files:** If selected, files that are attached to wiki pages will be stored in the specified directory. The directory can be an absolute path (such as <http://www.foo.bar/attachments/>) or relative to the Tiki installation directory (such as **attachments/**).

Note: The trailing slash (/) is mandatory and must be included in the path.

This area lists all current attachments. You can use this area to change an attachments storage location to either Database to File.

Rating

Rating is a measure of the quality or value of a product, service, or experience. It is typically expressed as a numerical score or a percentage, ranging from 0 to 100. The rating is based on various factors such as user reviews, satisfaction levels, and performance metrics. A higher rating indicates a better quality or value, while a lower rating indicates a lower quality or value. The rating is often used to help users make informed decisions about products or services.

Comments

• The $\frac{1}{2}$ part of the URL is a placeholder for a comment ID. It is used to identify the specific comment being referred to in the discussion page.

The URL structure is as follows:

- $\frac{1}{2}$: The first part of the URL, representing the comment ID.
- $\frac{1}{2}$: The second part of the URL, representing the page number or section of the discussion page.
- $\frac{1}{2}$: The third part of the URL, representing the revision number or timestamp.
- $\frac{1}{2}$: The fourth part of the URL, representing the user who made the comment.
- $\frac{1}{2}$: The fifth part of the URL, representing the content of the comment.

For example, if the URL is [https://en.wikipedia.org/w/index.php?title=Talk:Wiki&diff=1&oldid=123456789&comment_id=123456789&revid=123456789&user=123456789&text=Comment+Text](#), it means the user "123456789" made a comment with ID "123456789" on the "Talk:Wiki" page, revision "123456789", containing the text "Comment Text".

Spellchecking

„Spellcheckers“ are computer programs that check the spelling of words in a document. They compare the words in the document against a large database of known words. If a word is not found in the database, it is flagged as a misspelling. Spellcheckers can also suggest alternative spellings for words that may be misspelled.

Cache Wiki Pages

• Cache Wiki Pages

Wiki pages are cached by the Tiki CMS Wiki Engine. Caching is controlled by the `cache` parameter in the URL. The value of this parameter determines how long the page will be stored in memory before it is updated again.

The cache parameter can have the following values:

- `0`: The page is not cached at all.
- `1`: The page is cached for 1 minute.
- `2`: The page is cached for 2 minutes.
- `4`: The page is cached for 4 minutes.
- `8`: The page is cached for 8 minutes.
- `16`: The page is cached for 16 minutes.
- `32`: The page is cached for 32 minutes.
- `64`: The page is cached for 64 minutes.
- `128`: The page is cached for 128 minutes.
- `256`: The page is cached for 256 minutes.
- `512`: The page is cached for 512 minutes.
- `1024`: The page is cached for 1024 minutes.
- `2048`: The page is cached for 2048 minutes.
- `4096`: The page is cached for 4096 minutes.
- `8192`: The page is cached for 8192 minutes.
- `16384`: The page is cached for 16384 minutes.
- `32768`: The page is cached for 32768 minutes.
- `65536`: The page is cached for 65536 minutes.
- `131072`: The page is cached for 131072 minutes.
- `262144`: The page is cached for 262144 minutes.
- `524288`: The page is cached for 524288 minutes.
- `1048576`: The page is cached for 1048576 minutes.
- `2097152`: The page is cached for 2097152 minutes.
- `4194304`: The page is cached for 4194304 minutes.
- `8388608`: The page is cached for 8388608 minutes.
