Tags: A tag is a mark in the current state of the Wiki. They can be used to save the Wiki at regular intervals and to recover the whole Wiki to a particular state if something disastrous occurred. To create a tag simply enter a tag name and click the **create** tag button. To restore a tag select one of the existing tags and click **restore** (*all your Wiki pages will be lost and the saved state for the wiki will be restored!*). Since tags can take a lot of space you can remove tags that you don't want to use by clicking the **remove** tag button after selecting the tag that you don't want to use anymore.

Field	Description
Wiki Attachements	Specify if files can be attached to wiki pages.
Use Database to Store Files	If selected, files that are attached to wiki pages will be converted to BLOBs and stored in the Tiki database in the tiki_wiki_attachments table.

Field	Description
Use a Directory to Store Files	If selected, files that are attached to wiki pages will be stored in the specified dirctory. The directory can be an absolute path (such as http://www.foo.bar/attachments/_) or reltative to the Tiki installation directory (such as attachments/).
	Note: The trailing slash (/) is mandatory and <i>must</i> be included in the path.
Wiki Attachments	This area lists all current attachments. You can use this area to change an attachements storage location to either Database to File.

Table Syntax

Table syntax is used to create tables in a document. It consists of a series of rows and columns, separated by pipes (|) and enclosed in double pipes (||) at the beginning and end of each row. The first row is the header row, and the subsequent rows are the data rows. The syntax is as follows: ||header1|header2|...|headerN||
||row1c1|row1c2|...|row1cN||
||row2c1|row2c2|...|row2cN||
...
||rowNc1|rowNc2|...|rowNcN||

Example of both ways for inserting a new row

Using || for new rows
||r1c1|r1c2||r2c2|r2c2||

Using \n for new rows
||r1c1|r1c2
r2c1|r2c2||

Automonospaced text
