

Wiki Modules

module name

wiki_last_comments

comm_received_objects

last_modif_pages

quick_edit

usage

Shows the name of the commented pages, the beginning of comment and in tooltip the commenter and comment date.

A summary of objects received in your site from other sites (including Wiki pages)

Shows the name of the latest changed Wiki pages.

Extremely useful to review modifications

Allows to edit or create a Wiki page by simply entering its name

random_pages

search_wiki_page

top_pages

user_pages

Shows random pages at each pageload

Searches for Wiki pages matching (can be partially) the name entered

Most visited Wiki pages

Shows the pages edited (or created) by the module viewer

Wiki Plugins

To learn about wiki plugins, go to [Wiki Plugin](#)

List Pages

tiki-listpages.php

The setting in admin->wiki->wiki->list pages.

The perm is tiki_p_view

FIND

The find option filters on the pagename.

If you enter abc, it will search for the pages that have a name containing abc (for instance, the pages abcde, abc, wabc will be returned, but the page abxc will not)

If you enter 'abc efg' or 'abc, efg'(string containing different word), it will search for the pages with a name containing abc or efg or both (for instance 'abcee', 'xxabc zz yyefg'). If you want only the pages containing 'abc efg', you have to match exact match option.

It is possible to use wildcards in the find string:

- % to match an arbitrary number of characters (including zero characters)
- _ to match any single character

To match any special character precede it with \

Examples:

ab%c will return adbc, aeebcdd

a\b will return a%bccc but not acb
