

See also [Shared Secrets](#)

As of 2014-07-29, this is a tool for developers only. You need to write code for the external system to access the information. See developer documentation at [User Encryption](#). The system is designed so that encryption can later be implemented for data in Tiki (files, tracker items, etc.)

# Module Domain Password

This [Module](#) stores personal passwords for other domains securely in Tiki, as part of [User Encryption](#).

## USAGE

To use module **Domain Password** in a wiki page:

```
{module module="domain_password" domain="https://tiki.org" use_currentuser="y" can_update="n"
show_domain_prompt="y"}
```

where: Store personal passwords for other domains securely in Tiki

[Go to the source code](#)

*Preferences required:* feature\_user\_encryption

## Parameters

## Accepted Values

---

**Description**

**Default** **Since**

can\_update

domain

show\_domain\_prompt

use\_currentuser

---

If "y" the user can update the values, otherwise the display is read-only (y/n). Default: n

System the credentials apply for. The name must match a defined Password Domain

If "y" the word "domain" is shown before the domain. Otherwise the domain name takes the full row (y/n). Default: y

Use the currently logged-in user. The username is not editable. (y/n) Default: y

---
