ì'ëš" ì æëª© ë°" ìž...ë^ë<æ

➦ The text on a Title Bar can be centered and/or colored, and should be able to contain other HTML elements such as an image since it is actually a div. However, the function of a Title Bar as essentially a horizontal divider should be kept in mind.

Example:

~~red:::A Red Centered Title Bar:: ~~

Will produce the following Title Bar:

A Red Centered Title Bar

## Boxes

Boxes are added with the Caret (^) character. This character can be located anywhere on a line but it should be the first character. The first Caret indicates where the Box will start and a second Caret (on this or another line) indicates where the Box is to end.

Example:

^ This is a Box ^

Will produce:

This is a Box

See also [pluginBox](#).

## Page Breaks

Page breaks allow you to control the length of a page for easy reading. A new page can be added anywhere but should start at the beginning of a line. A page break uses 3 Periods (.), the keyword *page* and another 3 periods (.)

Example:

```
...page...
```

Would produce a page break.

The following image shows the bottom of a typical page that has multiple pages.

These files can be displayed with the following syntax:

**{img src=img/avatars/NAME}** where NAME is the name of the file.

**Note:** Punctuation is important! The difference between Avatars and avatars may seem minor - but - the difference is **File Not Found**

⏪ < page:1/6 > ⏩

The arrow buttons will take you (from left to right) to the First Page, the Previous Page, the Next Page, or the Last Page.

## Headings

These are added with one or more Exclamation Marks (!) at the beginning of a line. The number of Exclamation Marks used controls the size of the text and indentation level that a heading will have in a table of contents. The heading of the following paragraph uses three exclamation marks.

## Headings with Expandable Area

The content below a Heading can also be expandable. An Expandable Area is created by adding a Plus (+) or Minus (-) character after the Exclamation Marks. The Plus (+) and Minus (-) characters define what the default value is for the expandable area as shown below.

Example:

---

!!!+ and !!!-

Were used to create the next 2 Headings.

In either case, the Expandable Area extends to the next heading. When used, a + or - button is created that, when clicked, will expand or contract the area.

\* To make the (+)/(-) icons appear in front of the headings instead of going to the next line, Go to Admin Home>Wiki Setting, enable the "Display show/hide icon displayed before headings" feature.

## Closed Expandable Areas (Click the [+] to Open)

[+]

## Open Expandable Areas (Click the [-] to Close)

[-]

This area was open by default while the one above it was closed.
