```

In the example above, the following preferences would be set for using the identifier *client1.example.com*:

- feature_wysiwyg = n
- feature_sefurl = y
- helpurl = <http://support.example.com/>
- feature_wiki = y
- bigbluebutton_server_location = bbb.example.com
- bigbluebutton_server_salt = 1234abcd1234abcd
- browsertitle = Client #1 Intranet
- sender_email = [client1 at example.com](mailto:client1@example.com)

; at the beginning indicates comments

Disable classes of preferences

Preferences can be disabled by setting a value to each of them individually. However, this process may be long and will require maintenance with the evolutions of Tiki.

Tiki allows to set multiple rule priorities, each verification priority can allow or deny a preference. Rules can be specified at various levels, just like the preference overrides above.

```
Various rules
```

```
[global] rules.0 = deny experimental new [pro : global] rules.5 = allow new rules.10 = allow  
feature_wysiwyg
```
