

## WebspaceExplorer

1 and 1 has a nice tool which lets you unzip the files on the server. This is much faster than uploading all the files.

So when you download Tiki, get the .zip version

unzip on server via WebspaceExplorer can take 30-40 seconds

## Make sure you have PHP5

You may get something like this:

Parse error: syntax error, unexpected  $T_STRING$ , expecting '{' in tiki-install.php on line 48

By default, it's still PHP Version 4.4.9 as of 2010-11-06 http://faq.1and1.com/scripting languages supported/php/5.html

With the proper .htaccess, it becomes 5.2.6

This will change over time (and perhaps from server to server but at the time of writing) phpMyAdmin is 2.6.4 MySQL: 5.0.91

File uploads  With default configuration, file uploads are broken. ref: Understanding Encoding  You can solve by  1 using 5.4 or 6.0 2- apply this patch:  http://tkids.ar.sun.sourceforge.net/viewvc/tkidvikl/?view=revision&revision=30000 3- use adodb, instead of pdo as per http://tkid.org/ReleaseNotes5.0#Database_Encoding_Issues  thing to check  • Performance & what are differences of various plans  Error 500  I solved them with this instruction "RewriteBase /" after the "RewriteEngine On" in the .htaccess:  () RewriteEngine On RewriteBase / ()  Alias names of this page:  land1	Database is not localhost
With default configuration, file uploads are broken. ref: Understanding Encoding  You can solve by  1- using 5.4 or 6.0  2- apply this patch: http://tikiwiki.svn.sourceforge.net/viewvc/tikiwiki?view=revision&revision=30000  3- use adodb, instead of pdo as per http://tiki.org/ReleaseNotes5.0#Database_Encoding_Issues  thing to check  • Performance & what are differences of various plans  Error 500  I solved them with this instruction "RewriteBase /" after the "RewriteEngine On" in the .htaccess:  () RewriteEngine On RewriteBase / ()	This is not uncommon. When you are in tiki-install.php, make sure to replace <i>localhost</i> with the value provided by 1and1
