

Funcionalidades

TikiWiki es un "sistema de gesti3n de contenido" (SGC o CMS, de sus siglas en ingl3s) lleno de funcionalidades — est3 tan repleto de funcionalidades que puede ser abrumador, incluso para un usuario experimentado o administrador. Por lo tanto, parece adecuado y 3til dividir las funcionalidades de TikiWiki en estas categor3as generales:

- **Herramientas del Sistema de Gesti3n de Contenidos** Estas caracter3sticas permiten a los administradores y usuarios crear, mostrar, y mantener contenido accesible por red de todo tipo, incluyendo texto, datos binarios, im3genes, enlaces, y mucho m3is.
- **Herramientas de organizaci3n del Contenido y Ayudas de Navegaci3n** Estas funcionalidades permiten a las personas administradoras y usuarias organizar, estructurar, y presentar contenido de una forma navegable.
- **Herramientas de Comunicaci3n** Estas funcionalidades permiten a las personas administradoras y usuarias comunicarse entre ellas (y con el mundo exterior) por medio de numerosos medios, incluyendo mensajer3a interna, telefon3a de voz, intercambio de datos, y muchos m3is.
- **Herramientas de Administraci3n** Estas funcionalidades permiten a personas administradoras (y a personas usuarias a quien se les ha asignado los permisos apropiados) administrar todos los aspectos de un sitio basado en Tikiwiki.

Para navegar la documentaci3n, pincha con el rat3n en los enlaces siguientes.

FUNCIONALIDADES DE TIKIWIKI

Funcionalidad *Aplicación típica*

Herramientas del Sistema de Gestión de Contenidos

Articles	Fast-breaking news, announcements
