

Image Gallery User

The Menu

When Image Galleries are enabled and you have the right permissions, site visitors can see an Image Gallery menu can be clicked to open. From here you will be able to create galleries and upload images to the galleries.

Collapsed and Expanded Menu:

There are usually three options in the menu — Galleries, Rankings and Upload Images — and the options may change depending on your permissions. In our example, you can see an additional option "System Galleries". In this section, let's examine each option in detail.

Prior to Gallery Creation

At first, before galleries are created or images uploaded to them, the Galleries center panel appears as in this illustration. Notice the "create new gallery" link.

Creating a Gallery of Images

Clicking the "create new gallery" link displays a form to create a new gallery, with fields to fill-in, as you can see here:

The fields are explained in the following table:

Field	Description
Name	Short name for the gallery. Appears in listings.
Description	A description of the contents of the gallery.
Gallery is visible to non-admin users	If not checked, then the gallery will be visible only to users with the tiki_p_admin_galleries permission set.
Geographic	if checked then images can have a longitude and latitude and be displayed using the maps feature.
Max Rows per page	Used for formatting gallery appearance, this is the maximum number of rows of thumbnails, per page, that will be displayed to visitors.
Images per row	Used for formatting gallery appearance, this is the maximum number of thumbnails per row.

Thumbnails size X	Width for Thumbnails, in pixels.
Thumbnails size Y	Height for Thumbnails, in pixels.
Available scales	Scales available, according to your web hosts' image formatting software. May display 'No scales available'.
Add scaled images size X x Y	If available, you can add a scaled image of size X pixels by Y pixels.
Categorize	Use categories to group your Gallery with other Tiki objects. Here you can show and hide the category list, choose a pre-created category, check "Categorize" to add the gallery to a category, or, Admin your categories.
Other users can upload images to this gallery	If checked, users will be allowed to upload images to your gallery, but they won't be able to delete images or change the gallery.

Create a gallery for testing by filling in the form, and clicking Save at the bottom of the form. Once Tiki creates the gallery, it will be listed like so:

The screenshot shows the 'Galleries' page with a search bar and a table of available galleries. The table has the following data:

Name	Description	Created	Last modified	User	Imgs	Visits	Actions
Rick's Pix	Photos of friends, family, Japan, drumming.	Fri 16 of Jan, 2004 [13:22]	Fri 16 of Jan, 2004 [13:22]	admin	0	0	[Edit] [Delete] [Add]

Page: 1/1
1

If you want to browse the gallery, click its name. On each line in the listing, depending on your permissions set you can see the "Actions" you can take on each gallery:

If you hover your mouse above each of the Actions icons, you can infer that they link to a set of tools including:

- **Edit:** edit the gallery information using the same form you used to create the gallery. Here, you can change gallery information, your categories or the size of existing thumbnail images.
- **Delete:** remove the entire gallery and its images. Use this with care, as it is a permanent

operation.

- **Upload:** upload images to the gallery.
- **List:** browse the gallery's images as a list.
- **Perms:** configure permissions for the gallery (if you are an admin).
- **Make Map:** Generate a layer to be used with the [maps](#) feature (only available for geographic galleries).

Let's examine some of these items in more detail:

Upload Image

The Upload Action allows you to upload images to the listed gallery, and displays a form as follows:

Upload Image	
Browse gallery	
Image Name:	Sunny Small <input type="checkbox"/> use filename:
Image Description:	Sunny the Dog.
Gallery:	Rick's Pix
Now enter the image URL or upload a local image from your disk	
URL:	<input type="text"/>
Upload from disk:	D:\My Documents\! <input type="button" value="Browse..."/>
Thumbnail (optional, overrides automatic thumbnail generation):	<input type="text"/> <input type="button" value="Browse..."/>
<input type="button" value="upload"/>	

this picture is from an old tikiwiki version - Please feel free to update to a new one

After selecting a gallery you create, or a public gallery created by another user, you can either enter the URL of your image or select it from your local hard disk. Use only one method for each image, as results can be unpredictable if you upload the same image using both methods.

Tiki auto-generates thumbnails for uploaded images, but if you don't like the way they look, or if you do not want a simple thumbnail of the entire image, you can also upload your own thumbnails along with the image.

Batch upload means that if you upload a zip file, the file will be automatically unzip and the individual images will be uploaded. The compressed format accepted are .zip (WinZip, PKZIP, Windows Compressed Folder). (see [phpconcept.php /pclZip](#) for more details)

Remove any files from the folder that are not images (thumbs.db, etc...)

If the image is successfully uploaded, you will see its and its thumbnail displayed, as in this graphic:

Upload successful!

The following image was successfully uploaded:

Thumbnail:

You can view this image in your browser using: http://rm.cogleys.net/tikiwiki/tiki-browse_image.php?imageId=17

You can include the image in an Wiki page using:

```
{img src="http://rm.cogleys.net/tikiwiki/show_image.php?id=17" }
```

Success! The image was uploaded and stored into the Tiki database or into a folder on your server. Note the image, the thumbnail, and information about how to browse the image or include it in an HTML page or a Wiki page. Keep these links in mind for use in your Wiki pages or Blog posts.

Note: If Tiki's thumbnail is the same size as the image, there are several possible explanations:

- The image is a GIF. Tiki cannot resize GIFs do to copyright limitations regarding their format.
- Your web server's PHP installation does not have the GD or ImageMagick graphics manipulation packages installed.
- Your web server's PHP installation's GD or ImageMagick packages are too old.

Browse or List Galleries

Clicking on the gallery name link allows you to browse a listing of thumbnails for the images in the gallery. Clicking on the "List" action displays a non-graphical, quick-loading list representation of the gallery with one image per line. The list looks like this:

Browsing Gallery: Rick's Pix

[edit gallery](#) [rebuild thumbnails](#) [upload image](#) [browse gallery](#)

Photos of friends, family, Japan, drumming.

Gallery Images

ID	Name	Created	Hits	User	Filesize
18	27th Snareline [x]	Sat 17 of Jan, 2004 [19:44]	2	admin	110445
17	Sunny [x]	Sat 17 of Jan, 2004 [19:40]	1	admin	6010

Page: 1/1

1

In List View, click "Browse Gallery" to toggle back to its Thumbnail View. In the following graphic, you will notice a horizontal menu with links to Edit the gallery, rebuild thumbnails, upload images,

or toggle back to List View. Above the image list or thumbnails, there are links to sort by name, date, hits, user or size. For example, clicking Name sorts in alphabetical order, from A to Z, and clicking Name again sorts in reverse alphabetical order, from Z to A. Try sorting for all the options, once you have several images uploaded.

Browsing Gallery: Rick's Pix

[edit gallery](#) [rebuild thumbnails](#) [upload image](#) [list gallery](#)

Photos of friends, family, Japan, drumming.

Sort Images by [[Name](#) | [Date](#) | [Hits](#) | [User](#) | [Size](#)]

27th Snareline
✕ ⚙ ⚙
(992x680)[1 hits]

Sunny
✕ ⚙ ⚙
(134x137)[1 hits]

Page: 1/1

[comment](#)

For each image, a thumbnail is displayed showing the image title, its size and the number of hits (a hit is computed each time the image is browsed). Under each thumbnail, you will find icons for Delete, Edit and Popup which act on that image.

Click the thumbnail to browse the image actual-size. Here, you will find image information, an option to move the image to another gallery (if you have permission), and link information to allow you to display the image in an HTML page or a Wiki page, an article or a Blog. You will also see links to the Next and Previous images in the gallery to browse all the gallery images if you like.

Browsing Image: Sunny

[return to gallery](#) [edit image](#)

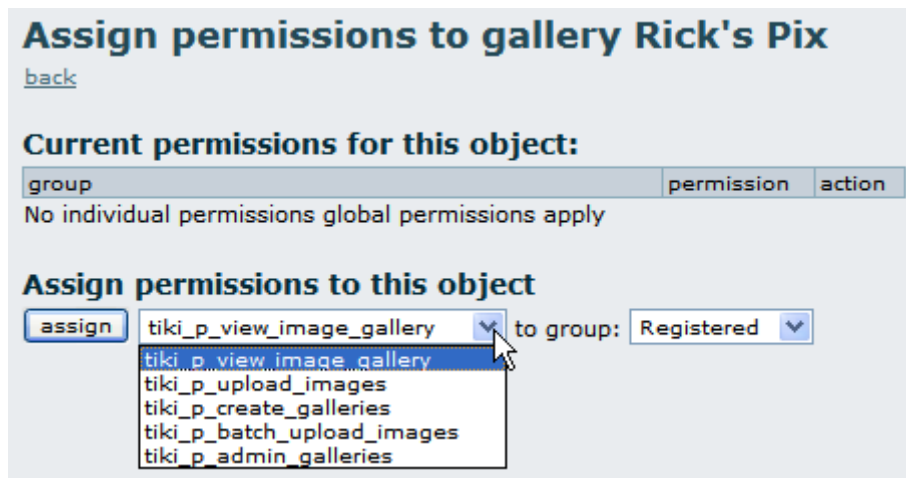

Image Name:	Sunny

Hits:	2
Description:	
Author:	admin
Move image:	Rick's Pix move

You can view this image in your browser using:
http://rm.cogleys.net/tikiwiki/tiki-browse_image.php?imageId=17
You can include the image in an HTML or Tiki page using ``

Individual permissions for image galleries

From the gallery listing screen, if you have the right permissions you can use the "Perms" action to set up individual permissions for an image gallery:

Assign permissions to gallery Rick's Pix
[back](#)

Current permissions for this object:

group	permission	action
No individual permissions global permissions apply		

Assign permissions to this object

to group:

- tiki_p_view_image_gallery
- tiki_p_upload_images
- tiki_p_create_galleries
- tiki_p_batch_upload_images
- tiki_p_admin_galleries

When you assign a individual permission for a gallery, you can override Tiki's global permissions system, so that only the users that have the permissions you have set for the gallery can view, edit or upload. This feature can be used to configure, for example, private galleries, paid galleries or galleries where only a special group of users can upload images.

The System Gallery

If enabled from the admin screen, Tiki can capture images referenced from other sites or URLs, storing them in its database, or in a folder on your webserver. Tiki displays those images in a special gallery called the "System Gallery". If you are an admin, you can browse the System Gallery, and remove images from it.

Tips & Tricks

Utility Gallery

One idea for a creative use of a Tiki Image Gallery is to upload buttons or icons that you might use in the pages on your site.

Browsing Gallery: Utility

[edit gallery](#) [rebuild thumbnails](#) [upload image](#) [list gallery](#)
Buttons etc

Sort Images by [[Name](#) | [Date](#) | [Hits](#) | [User](#) | [Size](#)]

 Tiki Button 1 X E S (80x23)[1 hits]	 Donate Button X E S (0x0)[1 hits]	 Amazon Button X E S (0x0)[1 hits]
--	--	---

Page: 1/1
1

[comment](#)

Random gallery image

In October 2008 a feature which can display a random image from an image gallery became available. A URL such as http://show_image.php?galleryId=2 will return an image which represents the specified gallery. The image selection is controlled by an option in gallery configuration which controls whether a random image is shown, the first image is shown, etc.

Shadowbox eye-candy

When [Shadowbox](#) feature is enabled (only on Tiki sites from [Tikiwiki 1.10](#) onwards), images can be shown in a more fancy way.

See this example from an image gallery:

Then when you click on an image (the one in the red circle in this example), the screen becomes blackish for some seconds while it loads...

..and and the image opens in the middle of the screen, with some nagivation links below.

Known bugs and problems

GIF Patent Issue: Thumbnail generation does not work for GIF format, resulting in a thumbnail which is the same size as the original image. This is due to patent issues, and cannot be resolved unless the patent for GIF format expires.
