

Mod author

This wikiplugin mod allows different content to be displayed depending on whether the user visiting the page is the creator of the page, a contributor or other user. (See [Mods User](#) for how to install a mod.)

Usage

Use the following syntax:

```
{AUTHOR(contributor=y|n)}some text{ELSE}other text{AUTHOR}
```

| Parameter | Accepted values | Effect | Since |
|-------------|---------------------|--|-------|
| contributor | y or n (default: n) | If set to y, only a contributor to the page will see the content (or the content before {ELSE}), if n, only the creator. | |

Unable to load the jQuery Sortable Tables feature.

A couple of tips on usage:

- The use of {ELSE} is optional
- Contributors cannot be specified if the history for the page has been deleted

Example

With this code,

```
{AUTHOR(contributor=y)}"This note is for contributors to this page."{ELSE} "This note is for users who have not yet contributed to this page." {AUTHOR}
```

Contributors would see: *This note is for contributors to this page.*

Other visitors would see: *This note is for users who have not yet contributed to this page.*
