

Mod mailman

Mailman is free software for managing electronic mail discussion and e-newsletter lists. Mailman is integrated with the web, making it easy for users to manage their accounts and for list owners to administer their lists. Mailman supports built-in archiving, automatic bounce processing, content filtering, digest delivery, spam filters, and more. See its features page for more details (<http://www.gnu.org/software/mailman/features.html>)

Install

See [Mods Admin](#) for instructions on how to install a Mod.

Package Config

Configure services *mailman*

You may want to add that line into your apache conf if you use rewrite rules
: RewriteRule ^/int([0-9]+) /tiki-integrator.php?repID=\$1 [QSA,L]
For this feature works, the apache user has to be granted the permission to
exectue the list_lists mailman command. You can use visudo and add
: www-data ALL= NOPASSWD: /usr/sbin/list_lists

Domain name	<input type="text" value="localhost"/>
Mailing-list server name	<input type="text" value="lists.localhost"/>
	<input type="button" value="configure"/>
