

Take a look at [wkhtmltopdf](#), for which support is built-in to Tiki

## Mod mozilla2ps

**mozilla2ps** is a XUL application to transform HTML (with CSS) into PDF format. It requires the following applications to be installed on the server: xulrunner (to run XUL applications), Xvfb (or another X server) on display :1 or xvfb-run, ps2pdf, and some basic fonts to be used by the X server. This mod supports everything that firefox supports and will generate a PDF that really looks like what the user sees in it's browser, even with complex Cascading Style Sheets. It's also faster than html2pdf or dompdf
