

Module shoutbox

This is a [stub](#). Some [screenshot](#) is needed

Parameters

The shoutbox is a quick messaging tool. Messages reload each time the page changes. Anyone with the right permission can see all messages. Another permission allows messages to be sent..

[Go to the source code](#)

Preferences required: feature_shoutbox

Parameters	Accepted Values	Description	Default	Since
buttontext		Label on the button to post a message. Default: Post		
waittext		Label on the button to post a message when the message is being posted if AJAX is enabled. Default: Please wait...		
facebook	word	If set to "1" and the user has authorized us with Facebook, the user can decide, if he wants to add the shout to his Facebook wall.		
maxrows	int	Number of messages to display. Default: 5.		
tooltip	word	If set to "1", displays message post dates and times as tooltips instead of showing directly in the module content. Default:"0".		
tweet	word	If set to "1" and the user has authorized us to tweet messages with Twitter, the user can decide, if he wants to shout via Twitter.
