

## Module Whats related

The `whats_related` module uses the [Categories](#) system to show you a list of items in the same category as the item you are viewing. Articles, Blogs, and wiki pages can all be shown in this module.

Whats related
<b>wiki page:</b> <a href="#">Autos</a>
<b>article:</b> <a href="#">I really like my car</a>
<b>blog:</b> <a href="#">This is my auto blog</a>

## Parameters

Lists objects which share a category with the viewed object.

[Go to the source code](#)

*Preferences required:* `feature_categories`

Parameters
<i>no parameters</i>

Questions:

- Are there parameters that control which types of documents are shown, e.g. only wiki pages?
- Why do article hits show the header text instead of the article title?
