

Navigation

Designing or creating a navigation plan is an important part of the initial [configuration](#) of tikiwiki can be accomplished using any of several features:

- [Menu](#) - (within [modules](#) on the left or right side of the main content.
- [Wiki Links](#), [Bookmarks](#), [PluginMaketoc](#) and [TOC](#) tags within the content itself (these are the most "organic" means of navigation, which grows and changes with user contributions.
- [Structures](#) which organize wiki content (pages) into a booklike order or hierarchy.
- [Categories](#) - which can define sets of pages/content and can apply special permissions to them.
- [Tags](#) - adding tags to objects or using backlinks in wiki pages (see [How to Tag](#) on the [Documentation Status](#) page).
- [breadcrumbs](#) - which can show the trail of last visited pages.
- [since_last_visit_new](#) - a [module](#) which can showcase "whats new" in a site.
- In all case some sort of [Naming conventions](#) should be in effect for a site.
