## Wiki tab

#### **Overview**

Use this tab to configure performance settings for the wiki feature

#### **To Access**

From the Performance Admin Panel page, click the **Performance** tab.

#### **Option**

Cache wiki pages (global)

#### Related Topics

- Performance
  - Wiki
- Cache

Enable page cache globally for wiki pages.

Wiki cache reduces server load but can cause some empty pages and other issues when using wiki plugins. Use only if necessary; it may be better to use an individual wiki cache for only the pages that require it. 

i≡ no cache | 1 minute | 5 minutes | 10 minutes | 15 minutes | 30 minutes | 1 hour | 2 hours

2 hours

Individual wiki cache

Page ranking reload probability

Allow users to change the duration of the cache on a per-page basis.

Calculation of page rankings is a resource-intensive task that cannot be performed at every page load. It will be calculated at random page loads based on a dice roll. This option indicates the number of faces on the dice. Larger numbers lead to reduced resource use, but less-accurate ranking.

Enabled

1000

Last modified header

Allow to ensure that a wiki page has not changed since the previous caching. This option helps clients (browsers, crawlers) to use less bandwidth and improve crawling and indexing of wiki pages.

# **Default**Disabled

The jQuery Sortable Tables feature must be activated for the sort feature to work.
