

Parameters

Show dynamic variables and their values.

Introduced in Tiki 15.

[Go to the source code](#)

Preferences required: wikiplugin_dynamicvariables

| Parameters | Accepted Values | Description | Default | Since |
|------------|------------------|---|---------|-------|
| linesep | xss | String to use between elements of the list if table layout is not used | , | 15.0 |
| layout | (blank) table | Set to table to show results in a table (not shown in a table by default) | | 15.0 |

Example

This code,

```
{dynamicvariables layout="table"}
```

Would produce a list of dynamic variables in a table. We can't do it here on doc.tiki.org because one of the dynamic variables causes a weird redirect. Here is the [Dynamic Variable causing trouble](#) on [PluginDynamicVariablesTest](#).
