

PluginPDF

Overview

To use the **PluginPDF** you must have installed and activated [mPDF](#). It is used to change default Administration PDF Settings and use custom settings for any specific Tiki page. When we apply **PluginPDF** on any page, all settings made in the plugin take effect on all the pages of the PDF document produced. Edit the page which you want to convert to a PDF document. Click on the Question Mark on the right corner of the editor as shown in the diagram below to open Plugin Help Window. See also:

[PluginPdftime](#)

Introduced in Tiki 17

It will open up the Help Window, click on "Plugin Help" and type in the Filter search box "PDF" and three plugins will appear in the list. Click on the icon before PluginPDF to open PluginPDF Options.

Plugins

Note that plugin arguments can be enclosed with double quotes ("); this allows them to contain , or = or >.

PluginPDF *pdf* [?](#)

For customized pdf generation, to override global pdf settings.

PluginPDF Page Break *pdfpagebreak* [?](#)

Helpful to format PDF files created, plugin adds page break in PDF file generated.

You get to see the list of PDF Options here, if you do not change or use any of the options then default options setup from the admin panel will be used. If you modify any PDF settings here on the page using the plugin then the new settings will be used.

PluginPDF

L Print Friendly PDF Default
Print friendly option will change theme background color to white and text /headings color to black. If set to 'n', theme colors will be retained in pdf

er PDF Orientation Default
Landscape or Portrait

? PDF page size Default

Sample PluginPDFÂ Code

```
{pdf Â pagesize="A4" toc="n" pagetitle="n" header=" Document Title | | {DATE j-m-Y }"footer="Document Copyrights |  
www.example.org |31" margin_left="10" margin_right="10" margin_top="20" margin_bottom="20"  
margin_header="10" margin_footer="10" coverpage_text_settings=" "  
Â coverpage_image_settings="http://example.org/filename.jpg" toc="y" toclinks="y" tocheading="Table of Contents"  
toclevels="H1|H2|H3" Â }
```

Margin Top & MarginÂ Header

This needs to be configured correctly for the page contents and header contents appear without overlapping. Margin Top is the space between document top and the contents of the document. And Margin Header is the space between Header and the document top. Check the diagram below:

Cover Page

This features allow users to add a cover page to their PDF comprising of a background image and text on top of it. There are two variables to set this up. This cover page is not visible on the TIKI page but will be added whenever a PDF is produced. Following is the image size guide to help design some great PDF cover pages.

Image Size and Dimensions for CoverÂ Page

Image Resolution: DPI / PPI 96

Page Size	Image Dimensions
Letter	816 x 1056 px
Legal	816 x 1344 px
Ledger	1056 x 1632 px
A0	3179 x 4494 px
A1	2245 x 3179 px
A2	1587 x 2245 px
A3	1123 x 1587 px
A4	794 x 1123 px
A5	559 x 794 px

Advanced Usage With A PluginList

If you need to pass data from your content into the parameters for plugin PDF you can use markup like this. This example formats a footer for each page using tracker item data depending on the `itemId` parameter on the URL.

```
{LIST()} {filter type="trackeritem"} {filter field="object_id" content=""} {OUTPUT()}#{display name="tracker_field_id"}  
{display name="wikiplugin_pdf" format="wikiplugin" orientation="P" footer="footer" margin_bottom="20"} {OUTPUT}  
{FORMAT(name="footer")}{literal}#{display name="tracker_field_id"} - {display name="tracker_field_title"} - {display  
name="creation_date" format="date"}| | AT {display name="tracker_field_building_text"}|35{/literal} {FORMAT}  
{ALTERNATE()}^No DSO data found^ {ALTERNATE} {LIST}
```
